The MagSafe Duo wireless charger lets you charge your iPhones and Apple Watches simultaneously. <https://digit.in/dec20-51>

Redmi Watch

Xiaomi launches first set of smartwatches in China, features 1.4-inch square display and 323PPI density. <https://digit.in/dec20-52>

Apple Watch Series 6

The most well-rounded smartwatch in the business

T

he Apple Watch is arguably the most popular smartwatch in the world. The

Apple Watch, in its sixth iteration, is more than just a smartwatch and far surpasses the offerings of a fitness tracker. This review looks at just how well the watch performs its job. We received a 44mm, cellular version of the Apple Watch for review.

Fitness Tracking

The Apple Watch Series 6 is one of the best devices you can get for yourself, if you're at all interested in any kind of fitness goals. One of the most important additions is the addition of the SpO2 sensor. The Apple Watch Series 6 finally offers the ability to track VO2 Max, a measure of how much oxygen your body can utilise during a workout. When it came to tracking bike rides, baseline data was collected using a Garmin Edge 500 bike computer, paired with a Garmin HR chest strap and Garmin's Speed and Cadence sensors. This combination allows for incredibly accurate tracking of bike speed, GPS, cadence and also heart-rate. The data reported by the Apple Watch and the Garmin setup was near identical, with very minor variances that would fall well within the margin or error. For long walks, the watch once again does an admirable job of tracking the number of steps and also your runs.

Beyond Just Fitness Tracking

While most trackers focus on heart rate and activities, the Apple Watch is able to deliver some very interesting metrics. This includes metrics such as Double Support Time (time spent with both feet on the ground while walking), Walking Asymmetry (the percent of time when the step from one foot is faster than the other), Heart Rate Variability (variation in the time interval between heartbeats). Needless

to say, if you're a data nerd the Apple Watch Series 6 offers a whole lot of it.

Sleep Tracking

The Apple Watch Series 6, thanks to WatchOS 6, can now track your sleep as well. Surprisingly, the sleep tracking is rather rudimentary and not as detailed as you'd expect from, let's say, the Samsung Galaxy Watch 3 or even the Garmin Instinct. However, if you were to use third-party apps like Pillow, they will be able to give you a stage-wise breakdown of your sleep.

Smart Features

The best way to summarise the Apple Watch Series 6's smart capabilities is by simply calling it a miniature iPhone on your wrist. With the cellular connectivity, you can legit leave your phone at home during your workouts, and still remain connected to the world. There's still no WhatsApp for the Apple Watch, but besides that, you can get calls, messages and even emails on your wrist. The micro-

phone built into the watch works decently well to take calls.

Health And Fitness App

All the data collected by your Apple Watch Series 6 goes to the Health app, where its collated and organised into neat little silos. Sadly, you get only the basic stuff. For bike rides, we would have liked to see the VO2-Max stats, but sadly, the Fitness app only shows the pace, distance, heart rate and recovery heart-rate, but does not list out important metrics like peak heart-rate or the VO2 Max.

Battery Life

Apple claims 18 hours of battery life, the same as the Series 5, which proved to be accurate in our tests. Annoyingly, you're going to be missing health data from every day, for the duration that the watch is on charge.

This could have an impact on the calculation of your "resting"

metrics such as resting heart-rate, resting calorie burn etc. If you don't care for those, it's still a gap in your daily health data. Still, thanks to the new S6 SiP, the Apple Watch Series 6 goes from Zero to 100 in under 90 minutes.

Verdict

Anyone part of the Apple ecosystem looking for a new smartwatch needs to strongly consider the Apple Watch Series 6. Those with the Series 5 could do with waiting for the next Apple Watch. If you're someone who takes their fitness metrics very seriously, the Apple Watch does offer one of the best tracking capabilities across a vast range of metrics.

—Swapnil Mathur

SPECIFICATIONS

44mm or 40mm case size | Always-On Retina display | GPS + Cellular5 | GPS | Blood Oxygen app | ECG app | High and low heart rate notifications | Irregular heart rhythm notification | Water resistant to 50 metres
