Beats launched a glow-in-the-dark variant of its Powerbeats earphones, in collusion with Ambush. <https://digit.in/dec20-56>

1MORE Colorbuds

A safe bet in the sub-premium price segment

San Diego-based audio brand 1MORE are back with their second product in the burgeoning true wireless market. Dubbed the 1MORE Colorbuds, the new-gen true wireless earbuds from the company attempt to combine good audio quality with a dash of style. Let's see if the Colorbuds manage to deliver a compelling audio performance with the tech packed inside these relatively tiny buds.

Build and comfort

1MORE has streamlined the design of the Colorbuds with it having a smaller shape and size than its predecessor. In our testing period, we found the Colorbuds to be lightweight, extremely ergonomic and reliable when it comes to the overall fit. The IPX5 rating on these buds ensure that they can shrug off sweat during workouts and endure light splashes.

The buds house the 1MORE logo on the rear. This area works as a touchpad for the buds via which users can control music playback and calls. The touch controls are limited, by default. While the default functions are limited, you can customise these via the 1MORE accompanying app. 1MORE has also added the auto-pause/resume feature which activates when you pull the buds out of your ear and put them back in respectively. This feature works well, however, the same cannot be said for the touch controls, which sometimes fail to read the input.

Now, finally moving over to the charging case of the earbuds, it does feel a bit flimsy, especially at the hinge of the case. The rounded design also tends to bulge out of some pockets.

Features

Priced at ₹7,999, the 1MORE Colorbuds offer a number of features, however, don't expect features such as ANC and Ambient Sound at this price point.

Powered by Bluetooth v5.0, the earbuds support aptX and AAC for streaming to

Android and iOS devices. The inclusion of the aptX codec means smooth streaming on Android devices and slightly better sound and wireless connectivity. Additionally, the buds also support mono mode, where one bud can be used independently of the other. Finally, coming to the app, there's no customisable EQ available, which is a bummer. You can only customise controls, enable or disable Smart Playback (auto-pause/play) and update the firmware via the app.

Performance

The Colorbuds offer compelling sound at the lucrative sub 10K price point.

The full range balanced armature with the Colorbuds definitely err on the side of the lows yet they aren't muddy or distorted in any way. Amped up lows and bass response is evident in EDM, pop and Bollywood tracks, and there is a bit of auditory masking in the mids due to the exaggerated lows. Nevertheless, the mids by themselves aren't suppressed, so they earbuds don't have hollow-sounding vocals and lead instruments.

Tracks such as *Scars* by *I Prevail* have full-sounding vocals despite the slightly weighty drum beats. While these aren't audiophile-grade earphones by any means, but they have

enough substance and character to be enjoyable across a vast array of genres.

Coming to call quality, the Colorbuds employ four mics combined with cVc 8.0 ENC technology which offers pretty decent microphone performance. During calls, our voice sounded clear and distinct and background noises were mitigated significantly.

Battery life

Battery life, unfortunately, is one place where the new Colorbuds have gone backwards from its predecessor, the 1MORE Stylish. While the Stylish provided 6.5 hours of continuous playback on the earbuds from a single charge, the Colorbuds drops that figure by half an hour. The earbuds' battery life is rated at 6 hours, while the total battery life with the charging case is a respectable 22 hours. In our tests, we managed to get about 5 hours and 45 minutes of playback from a single charge. The charging case managed to top off the buds two times fully, and got it to about 50 percent the third time before running out of juice. These figures are strictly decent in 2020, especially since we have competitors such as the Lypertek Tevi that feature a whopping 70 hours of total battery life!

Verdict

If you are scouring the market for a reliable pair of true wireless earphones under 10K, the 1MORE Colorbuds are a pretty safe bet. The buds sound great, the fit is extraordinary, they come with aptX support, and an IPX5 rating. If battery life is paramount to you, you may want to look elsewhere.
