

iMicro Q2

Funding: US\$ 300,483 pledged of US\$ 10,160 goal

Link: <https://dgit.in/iMicroQ2>

Following the success of the iMicro Q, the first Fingerprint Microscope in 2018 and the iMicro C, the improved version of the device in 2019, the company QingYing E&T LLC have now come out with the iMicro Q2, a Fingertip Microscope capable of providing magnification up to 800 times. The device's upgraded design also means that it can work with any smartphone out there. The iMicro Q2 is extremely diminutive, the size of a human fingertip, and weighs merely 0.5g. Also, it is pretty thin measuring only 3.2mm, which means it won't add a lot of bulge to your smartphone's camera module.

The iMicro Q2 comes with the same magnification as the original iMicro - 800x. The device also allegedly has very low distortion, which the company has said is comparable to a desktop microscope, and a resolution power down to 1 micron. You attach the

device to your smartphone by bringing the reusable nano-suction pad on it close to your smartphone's primary lens. Put it on, and you're ready to see the micro details in the world around you! The device generates images using optical magnification, which can then be seen on the smartphone's camera viewfinder. Furthermore, the phone's digital zoom can be used to ramp up the magnification even more. The device allows you to get an up and close look at everyday items as well as things such as human blood smears, scales on a human hair, and others.

Emo

Funding: US\$ 442,824 pledged of US\$ 50,000 goal

Link: <https://dgit.in/Emo>

Emo is an endearing desktop pet equipped with AI smarts and loads of personality. This is thanks to the vast number of sensors and tech the device houses within it. The robot pet can react to users with over 1000 different faces and movements. What's more is that Emo, like a real-life pet, acts naturally curious and moves around to explore its surroundings, all without ever falling off the desk. Emo can track different sounds, recognise up to 10 people and objects, and even navigate around obstacles on your desk. The device houses an AI-enabled wide-angle camera, four smart digital servos to move, 5W wireless charger, optical drop sensors, far-field mic-array, neural network processor + CPU, a 6-axis gyroscope and accelerometer and a 3W speaker. A combination of these components allows Emo to understand what's going on around it. The robot can process large amounts of images, sounds, and other data to make it better at interacting with humans around it. If you want to talk to it, you simply say 'Hey Emo!' and the robot starts capturing sounds to respond to. You can even pet Emo and it can feel it due to the touch sensor equipped on its head. Emo can even play online games with you such as Uno, Monopoly and many others. It has an accompanying app that can be used to play these games, check your life moments that have been recorded by Emo, set up smart lights, and much more.

Flex

Funding: US\$ 196,419 pledged of US\$ 50,000 goal

Link: <https://dgit.in/Flex>

MIOPS, the makers of camera gadgets such as Smart Trigger and Mobile Remote, have released another smart camera gadget named Flex. The product is designed to make capturing unique and eye-catching photos easy and hassle-free. It can be used by photographers to automatically shoot and create timelapse videos, capture challenging images of lightning strikes or bursting balloons and more. The device attaches to your camera's hot shoe and

can be controlled via an accompanying app that is available for both iOS and Android devices. Right from simple shutter button control to capturing long exposure time-lapses, Flex can do it all. For timelapse videos, Flex's application shows you a live preview of the timelapse in the midst of

the shooting process so you can make sure the framing and lighting are to your satisfaction. It can also automatically change your camera settings to capture 'Holy Grail' timelapses which is a smooth timelapse transition from day to night or night to day. The device also excels at capturing high-speed photography such as lightning strikes and capturing falling food. In fact, the device comes with a special lightning detector and triggers the camera to capture an impressive lightning image. For capturing balloons being burst or falling food, Flex uses its inbuilt sound sensor to activate the shutter button. The device is compatible with both DSLR and mirrorless cameras from Nikon, Canon, Sony, and Fujifilm.
