

**Y**ou can have the very best gaming setup possible but if you're lacking in the audio performance department, your ability to have an immersive and wholesome gaming experience will be tainted. A good pair of gaming headphones can provide you with spatial and directional awareness in the virtual gaming world, which can often give gamers a competitive edge. Additionally, having a gaming headset with a top-notch microphone is also essential, especially when you play with multiplayer games with teammates. In the sea of gaming headsets that are on the market today, picking out gems can often prove to be a chore. If you're looking for the very best gaming headsets that released in 2020 in India, look no further. Let's delve into the contender that beat out the others to claim the Digit Zero1 trophy.

#### WINNER: ASUS ROG THETA 7.1

Surround sound seems to be the name of the game this year, and the ROG Theta 7.1 gaming headset features excellent 7.1 channel surround sound. This is achieved by employing four large 'Essence' drivers in each cup which deliver the full-spectrum, 7.1 surround sound with impressive fidelity. The Theta 7.1 also comes with a customised 7.1 DAC with support for the SupremeFX S1220A audio codec. During our gaming tests, the ROG Theta 7.1 delivered spectacular

**Logitech G733 Lightspeed**  
Price: ₹15,495

**Cooler Master MH650**  
Price: ₹5,600

sound with solid directional awareness in a wide and expansive staging area. Footsteps and gunshots were easy to pinpoint. The headset also has a pretty capable microphone which comes equipped with AI smarts that artificially cancels out most background sounds. It results in your teammates hearing very little of your surroundings. However, there is a slight distortion in the wearer's voice which may be caused due to the AI clipping out consonants from his/her voice. That's our only gripe with the headset. Overall, the headset is excellent for gaming and wins the Zero1 Award in this category.

#### RUNNER UP: LOGITECH G733 LIGHTSPEED

The Logitech G733 Lightspeed stays true to its name. This wireless headset is extremely lightweight and is comfortable to wear even during gaming sessions that span across hours. The headset comes with DTS Headphones X 2.0 surround sound support work well to provide an extremely immersive gaming experience. The directional sound was pretty accurate and the headset has an expansive soundstage as well. Games such as Valorant and CS:GO really come alive with this headset with impactful gunshots, directionally-accurate vocal cues such as footsteps, and generally impressive and balanced audio quality even for background soundtracks in games. The microphone on this headset is pretty decent, however, you can actually get it to sound much better than its default configuration by simply installing Logitech's G Hub software and turning on the Blue Voice functionality for the mic. Our only real gripe was the lack of passive isolation.

#### BEST BUY: COOLER MASTER MH650

Priced competitively at ₹5,600, the Cooler Master MH650 takes our best buy recommendation since it provides surprisingly good gaming performance for the price tag. Equipped with virtual 7.1 surround sound, gaming with these headphones was a pleasant experience. The headset managed to pinpoint aural cues such as footsteps and gunshots relatively accurately. However, with surround sound off, many games' audio starts to sound flat and listless. The microphone is pretty impressive for this price range, picking up our voice and delivering it clearly to teammates. The mic does tend to pick up ambient sounds, however, it's not to a point where it gets unbearably jarring. Overall, the Cooler Master MH650 is a pretty capable gaming headset you can purchase for just over 5K.
