About Damn Time!

David Fincher is creating a miniseries on "Cancel Culture". South Park did it first though... <https://digit.in/dec20-04>

The best superhero movies to watch on Amazon Prime, Disney+ Hotstar and Netflix

Time to fly through these superhero flicks

Andrew Lu | andrew@digit.in

Superheros have essentially become the new gods of our generation. With powers that rival even the most powerful mythological figures, superheroes have sort of taken over the role that mythical heroes have held for centuries. It's no surprise that superhero movies are some of the highest-grossing films in history. Having conquered print media, superheroes have now made their mark on cinema and what better way to explore the genre than to check out the top superhero movies on Prime, Hotstar and Netflix?

AMAZON PRIME

Blade

The first Blade film was truly a revolution for its time. Released in 1998, Blade stars Wesley Snipes as the half-vampire, half-human butt-kicking vampire slayer who makes it his mission to hunt down the vilest vampire of them all in Deacon Frost, played with manic glee by Stephen Dorff. The film also gave Marvel its first real hit with the R-rated superhero flick. The action is tight, and the story isn't too complicated as to bog the film down.

The Incredible Hulk

The second Hulk reboot, The Incredible Hulk was also one of the first few films released by a then fledgling Marvel Studios. Remember, this is before the company struck gold with Iron Man, so they put all their chips on the green giant.

And while the film did not crush box office records, it did relatively well and gave Marvel the foothold it needed to then release the first Iron Man film, and as they say, the rest is history.

Wonder Woman

Wonder Woman was a breath of fresh air in the theatres and really put DC on the map after the comic book giant had released a bunch of films that did not seem to resonate with audiences. Starring the ethereal Gal Gadot, Wonder Woman tells the tale of Diana of Themyscira as she navigates the perils of World War 1 and tries her best to end the war. The film has a ton of heart and is definitely worth a watch.

Daredevil

Ok, so we'll admit, this isn't the best representation of the character of Daredevil, but the film actually works, despite it all. Starring Ben Affleck as the Daredevil, the film has its fair share of excellent action scenes and at the end of the day is a tender love story between Daredevil and Elektra the assassin. Also, Colin Farrell totally crushes it as the villainous Bullseye in a performance for the ages. If you really want to take a trip down memory lane as far as superheroes come, it doesn't get better than Daredevil.

Man of Steel

Man of Steel saw Zack Snyder bring his trademark style to the DC universe in a big way. For the first time on the big screen, we got to see the iconic destruction of Krypton and Superman's first real adventure as he battles General

Zod and his army of zealots, hellbent on destroying Earth and turning it into New Krypton. Plus, Henry Cavill totally pulls off the red cape and blue suit and we can't imagine anyone else playing the role after.

Aquaman

With the number of production problems this film faced, we were unsure that it was even going to be released. But, as fate would have it Aquaman came out with a bang and put DC on the map. But, behind the scenes meddling by DC Chief Creative Officer Geoff Johns really did the film a disservice as Johns has no idea about what goes into a great story. But, it was all good in the end as we finally got to see Jason Momoa as Aquaman on the big screen courtesy of James Wan of The Conjuring fame.

Venom

This film was not even supposed to work and there wasn't too much hype behind it but surprisingly, Venom is a pretty good superhero film. Star-

ring Tom Hardy as Spiderman's greatest villain, Venom is a funny yet action-packed superhero tale that doesn't take itself too seriously. Imagine a race of sentient parasites that bond with their hosts to give them incredible powers and that's what Venom is. The film also features Riz Ahmed as a ruthless tech mogul who wants to use said parasites to jump-start humanity's evolution into something more sinister.

DISNEY+ HOTSTAR

Guardians of the Galaxy

To be fair, the Guardians of the Galaxy were always C-listers in the Marvel
