comic book universe and it took a talented director like James Gunn to really make the team work on screen. Part of it also has to do with Chris Pratt's infectious charm. The film is a rip-roaring ride through space and time as the Guardians have to prevent a Kree invasion of the Nova Corps and it all comes down to the most impromptu Dance Off in the universe.

Thor: Ragnarok

The third film in the Thor series, Ragnarok needed a director like Taika Waititi to really inject some much-needed humour and colour to the film.

After the first two films were not as well-received as the other MCU films, it took Waititi's direction and story-telling abilities to make the final film in the Thor trilogy shine. The only downer in the whole film is the casting of Tessa Thompson as Valkyrie. Her acting abilities are non-existent and she ruins what could have been a perfect action-comedy superhero film.

Glass

This is one of the surprises we were talking about. Yes, this is a pure superhero film. Just not in the way you think. Glass is a sequel to Split which saw a crazed James McAvoy play the part of his life as a schizophrenic mad-man with 27 different personalities. One of those personalities is called the Beast and that's exactly what he becomes. The film also sees the return of Bruce Willis as the Unbreakable man and Samuel L Jackson as the broken man called Glass. To say any more would be spoiling the plot so take our word for it and check this mind-bending film out.

Avengers: Infinity War/Endgame

We're clubbing these two films together because they cannot be viewed separately. Endgame and Infinity War are two sides of the same coin and watching them side-by-side will give you the complete story. These two films are

essentially the end of the Third Phase of the MCU which kind of signals the end of Marvel movies as everything that comes next will pale in comparison to these two masterpieces of superhero films.

Deadpool

And last but not least, we've got the Merc with a Mouth, Deadpool rounding off the list. When the film was first announced, we had our doubts about the zany nature of the character but once the first R-rated trailer hit, we were sold. The film is a rowdy, insane ride with the funniest and one of the most dangerous characters in the Marvel comic book universe. It also really helps that Deadpool is played by the always funny and charming Ryan Reynolds.

NETFLIX

The Amazing Spider-Man

Even though the first reboot of the Spider-Man franchise didn't really break the box office, it was still a pretty decent film. The film also marks

a stark departure of the character from his geeky, shy roots and throws him into the shows of the very talented Andrew Garfield as the web-slinging hero. An origin story of sorts, The Amazing Spider-Man also gave us one of the coolest and much-anticipated villains in the form of the terrifying Lizard, aka Dr Curt Connors.

Justice League

We had to include this one here as it's pretty much DC's answer to The Avengers. Although the film did not reach the heights that Marvel's Avengers did, it still managed to make a ton of money at the box office. Also, seeing Batman, Wonder Woman, Aquaman, Cyborg, The Flash and Superman taking it to Step-pewolf is a sight to behold. The film was pretty much ruined by the meddling Geoff Johns who is DC's Chief Creative Officer, the film still had a ton of heart and managed to entertain fans who love the characters.

The Dark Knight Rises

The Dark Knight Rises is the last film in the Christopher Nolan Batman trilogy and it caps off a milestone in DC's film superhero film catalogue. A more gritty and realistic take on the Caped Crusader, The Dark Knight Rises sees Batman battling back from a gruesome injury at the hands of his nemesis Bane and taking back the city of Gotham in an action-packed extravaganza that closes out the trilogy in style.

Iron Man 3

Although Iron Man 3 did not capture the same fun vibe of the first film, it was still miles better than the mess that was Iron Man 2. Plus, the creators of the film adapted some of the best Iron Man stories such as Extremis and more and fit them into a film. Robert Downey Jr is in fine form here as he reprises the role of Tony Stark and looks to take out Guy Pierce's Adrian Killian. Also, Ben Kingsley as The Mandarin is just wonderful.

Watchmen

The comic book that changed comic books forever finally got the big-screen treatment with 2009's Watchmen. Although the writers of the film had to tweak the ending for the big screen, they still maintained the spirit of the comic book, unlike the terrible Watchmen TV show that had no business being associated with such a legendary comic book. Skip the show and check out the film instead.

Guardians of the Galaxy: Volume 2

The first film was such a sleeper hit that fans were not ready for the laughs and heart that the Guardians of the Galaxy brought to the MCU. The second film does add a lot to the mythos of the MCU in the form of Ego the living planet but still retained that same heart and spirit that made the first film such a great watch. If you've seen the first film, the sequel is truly a worthy successor.
