Earthworks

Also known as land art and environmental art these are ephemeral and biodegradable pieces of art made from whatever materials are available locally at the site, including sand, stones and leaves.

↑ As part of a series called the Human Story, Saype creates massive paintings using biodegradable spray paint, that can only be truly appreciated from stationary airships. The motto of the series is "Impact people, without impacting nature."

← American artist Stan Herd creates these intricate pieces of land art by planting and growing plants in the patterns that can be recognised from a high enough vantage point.

← The people of the small village of Inakadate in Japan make living paintings by carefully planting strains of rice in various colours. The crops are harvested just like any other crops.

← Andres Amador creates impressive pieces of art, using the moist sand on beaches as his canvas, and a humble rake as his paintbrush. The tides eventually wash away the patterns.

← Crop Circles are common examples of land art that are often made mischievously by those who want to create a mysterious atmosphere involving UFOs and farm animal abductions.

← Carl Jara makes recursive, iterative pieces of sand art, that look like something that has come out of a 3D printer after a lot of modelling and planning, instead of something made of mud.

← Every year, Japanese students create these giant straw sculptures on top of wooden frames hidden inside of beasts both real and imaginary at the annual Wara Art Festival.
