NVIDIA launches RTX 3060 Ti and preps for more

After launching high-end cards, NVIDIA is now filling out the mid-range ranks starting with the launch of the RTX 3060 Ti. And with AMD launching their RX 6000 series, NVIDIA is preparing for more high-end cards to act as direct competitors to AMD's cards on a per-per-dollar basis. We should see variants of the RTX 3070 and 3080 soon.

WHAT'S NEW

Modern Computing Alliance formed

Several tech giants have banded together to form the Modern Computing Alliance to work on interoperability between their individual offerings. Founding members of the alliance include: Box, Citrix, Dell, Imprivata, Intel, Okta, RingCentral, Slack, VMware, and Zoom will be joining Chrome browser, Chrome OS, and Google Workspace. The group is focused on four key areas – security and identity; remote work, productivity and collaboration; health care; and performance. Their collective mission states, “To drive ‘silicon-to-cloud’ innovation for the benefit of enterprise customers—fueling a differentiated modern computing platform and

providing additional choice for integrated business solutions.” Most of the founding companies are focused on enterprise offerings and end-users could see the benefits later on. The group has also opened doors to build a council composed of key executives from the industry to identify problem areas that the Alliance can work towards solving.

Apple lays bare Facebook's data collection methods

Apple's latest privacy policy update has put Facebook under the microscope. The latest iOS update brought several changes which has made it difficult for Facebook to track its users outside of Facebook-owned apps such as WhatsApp, Instagram, Messenger and Facebook without the users' explicit consent. Also, the latest iOS update shows all the methods that Facebook employs to track its users. The

list is quite extensive. Facebook, in turn, removed the verified page tick from Apple's official Facebook page. Facebook's advertising business heavily depends on its ability to track users outside of Facebook apps and this latest move from

Apple could hurt some of Facebook's revenues. Facebook said that the stopping of targeted ads would impact its business with not only big companies but also small businesses. In response Apple stated that the update doesn't stop users from being tracked if they wished to do so. The only thing changing is that users now have to give explicit permission to Facebook to be tracked.
