

Lens Technology Under Fire

The Chinese Apple supplier is being accused for allegedly using thousands of forced Uighur labour. <http://dgit.in/jan21-55>

Thermite RS3

LA Fire Dept unveils their compact, robotic, fire fighting vehicle that shoots water at 2500 gallons per minute. <http://dgit.in/jan21-56>

can be used for accessing all passport related services in a handy manner, except a digital version of the passport itself. The app can be used to locate the Passport Seva Kendra nearest to the location of the user. It can also be used to apply for a passport directly. Information on the progression of the application, as well as slots available for appointments, are indicated directly through the app itself. Users can also avail the help of the document helper, that guides users through the application process, and helps them be more prepared.

Indian Air Force: A Cut Above [DISHA - IAF HQ]

Developer: Threye: Military Games

This one is a little off center, but is an official game by the Indian Air Force, developed by Threye. The company is involved in building mixed reality simulations for military purposes, as well as drones for providing on ground intelligence before an operation. This game is a side project, and is intended to increase awareness about the capabilities of the Indian Air Force, as well as introduce the youth of the nation to experience the whole process of what it takes to be an IAF fighter, right from recruitment to flying, all without leaving the comforts of their chairs.

Digital India

Developer: DeitY/NIC

This is one of the problem apps, and we haven't been able

to find it out on any of the official stores, if you do, please do mail in to us. The .apk file is available for download directly from the MyGov App store, at <https://apps.mgov.gov.in>. We are even mentioning this app which is just a wrapper for the web platform, because of the various misleading apps on the Play Store that all claim to be secure methods of storing virtual copies of all your

documents. It is not really a good idea to go around uploading your PAN cards and driving licenses into random apps.

Postinfo

Developer: Centre for Excellence in Postal Technology

Did you know that if you walk into a post office, and mail a regular letter or post card, even that can now be tracked thanks to a barcoded sticker added to every mail? Mailers get a copy of the code, which then can then be tracked using the India Post website, or Postinfo, formerly known as the India Post Status Tracking app. The app is also a handy tool that can be used to calculate the postage for any parcel, and figure out the amount for insurance coverage. If you are unsure about where the nearest post office is, the app will help you find that out too!

mSwasthya apps

Developer: mSwasthya

Developed by C-DAC Mohali, these simple

to use hi-tech apps provide many health care needs for both patients and doctors. The blood pressure monitor uses external sensors to record changes in blood pressure over time. Similarly, there is a diabetes monitor, a calorie counter, a nutrition coach, and other apps dedicated to address particular issues. The data is stored in the cloud so the users can access their own data at any time through the web, and easily share it with doctors as well. There is also an app to help parents track the growth of their children.

112 India

Developer: MHA, Govt of India

While the stories in the media make this out to be an app oriented towards women's safety, it is actually an app for all the citizens of the country to

contact emergency services through a single interface. Critical details of the user such as name, age and gender can be saved in profiles that allows the emergency responders to get the necessary info. There is a panic button to notify the Indian Emergency Response Support System (ERSS), and users can choose to reach out to the police, fire department, ambulance or "other" which is for disaster management teams.

FARMS- Farm Machinery Solutions

Developer: NIC eGov Mobile Apps

This is an ambitious and cutting edge project that hopes to introduce farmers in the country to the concept of shared economy. It is on the lines of apps such as Spinlister for sports equipment or Turo for vehicles, which few urban inhabitants have heard of as well. The idea is to allow farmers to lease unused farm equipment, without having to know too much about the platform. The farmers can earn extra income, and the collective investment of the country in farm equipment can be better utilised. The app is multilingual, for the benefit of all farmers.

Aykar Setu

Developer: Income tax Department

This app helps for the sole reason of making

it easier to pay your taxes, and to access all the services of the Income tax department on a mobile platform. The IT department seems to have gone out on a limb to make taxes fun, with a chatbot that answers any questions you may have, and a game to test your tax knowledge as well. The best service available is the insanely successful Tax Return Preparer Scheme, which summons a trained professional to your doorstep, who will provide you with the guidance necessary to file your income tax returns.
