

Hypocrisy

Xiaomi Mi 11 to not include a charging adapter, after mocking Apple for the same reason. <http://dgit.in/jan21-85>

LG Stylo 7 Design

Leaked renders reveal the phone comes with a stylus housed within the body, and a triple rear camera setup. <http://dgit.in/jan21-86>

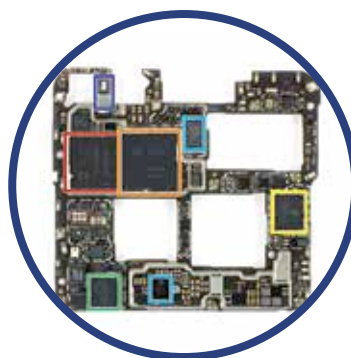

The display debacle

The Huawei's screen is tricky to remove owing to its ridiculous 88-degree curved form factor. Nevertheless, it's a good screen that comes with a high refresh rate and 240Hz touch sampling rate. Even after applying generous amounts of heat and carefully slicing the sides to loosen the adhesive, the glass is prone to cracking when attempting to remove the display.

Huawei Mate 40 Pro

The silicone labyrinth

Once almost everything is out of the way, the motherboard of the device is accessible. The mainboard houses the 5 nm Kirin 9000 5G SoC with octa-core CPU and the Mali-G78 MP24 GPU. On the front, you also have the Samsung KLV8G8UHD-B-C2E1 256GB UFS 3.1 storage, Chengyan K3LK3K3 LPDDR5 SDRAM from SEC which is layered over the SoC, HiSilicon Hi1105 Wi-Fi 6 module, HiSilicon Hi6365 RF Transceiver and a few other chips. The back houses the HiSilicon Hi6421 and Hi6423 Power management IC, the HiSilicon Hi6D05 Power Amplifier Module and some mystery chips that haven't been identified.

Easy battery replacement with pull tabs

Those who are concerned about the reparability of their devices will be glad to know that the Huawei Mate 40 Pro comes equipped with orange-coloured battery pull tabs which allow for completely heatless battery removal. The battery in this phone is 16.94Wh (4400 mAh) and has slightly lesser capacity than the battery found in the Mate 30 Pro. Also, the battery can be charged at up to 66W and up to 50W wirelessly!
