

ViewSonic X100 Projector

The cinema LED-based, 4K HDR home projector comes with wide lens shift and Harmon Kardon speakers. <http://dgit.in/jan21-39>

Daiwa Smart TV Launch

The 43-inch full HD TV comes with Alexa built-in, letting you control other Alexa-enabled smart appliances. <http://dgit.in/jan21-40>

LG GX 65 OLED TV

Premium Design, Premium Features

Price
₹3,24,990

LG's OLEDs have had a sleek design bringing thin OLED panels, angular tabletop stands and a slight bulge at the back to house the components and connectivity options. However, this year LG has the LG GX. The TV is super thin, the thinnest we've seen and when mounted on a wall, it sticks to the wall and looks like a piece of art more than a TV.

Build and design

Even though the TV sits flush with the wall, you can extend it by pulling the TV in the front a bit. But it isn't enough to let you comfortably reach the connectivity ports which is a bummer. You should most definitely connect all the cables you want to the TV before wall mounting it.

Display and picture quality

Since this is an OLED TV, the peak brightness isn't as much as some LED TVs we've seen but it gets bright enough to enjoy HDR content. We can expect it to have a great contrast ratio when both bright and dark sequences occupy space on the screen. The finale of Wonder Woman is a great example of this. We have the protagonist and antagonist battling out at night with lightning and fire illuminating parts of the screen. Watch this movie in a pitch-dark room and this TV and you will get a true cinematic experi-

ence. When lightning illuminates a part of the screen, the passive illumination of trees in the background is easily visible without any blooming. The LG GX has all four HDMI ports as HDMI 2.1 which means that when you connect it to the Xbox Series X, PS5 or the new NVIDIA 30 series GPUs you will be able to take advantage of features like ALLM and VRR along with gaming at 120fps. But for this test, we have stuck to the PS4 Pro and Xbox One X. Games looked vivid and bright in HDR and keeping the games in the quality mode (for Dirt 5) we got the best visual experience. Gears 5 on the Xbox One X has a very vibrant colour pallet and the "instant game response mode" kicks in when the console is detected. Assassin's Creed Odyssey is one game that's beautifully mastered in HDR and it shows, especially when cycling through the day-night cycle in the game. Needless to say, if gaming on a large screen is a priority for you, nothing beats the LG GX.

Audio performance

The LG GX has a total of 60 W of sound output and has a 4.2 channel setup. The TV can get really loud, that's for sure. Ready Player One is one of our benchmarks for audio

performance and the race at the 13-minute mark has cars whizzing past the screen. While the TV can get loud during this sequence and retains the details we expect from a TV speaker, what it lacks is channel separation. Unlike the Sony A8H, which gave us a clear movement from left-to-right during the sequence, with the LG the sound was coming straight from the TV. The TV speakers also have bass but lack the thump.

UI

The LG GX runs on the company's WebOS platform. The highlight of the LG UI is its magic remote which lets you control the cursor like a mouse on the TV. Overall, the LG UI has changed slightly from last year, and the changes are in the right direction. The apps library may not be as robust as the Play Store on Android TV, but it has all the popular and important apps. The only downside is that Hotstar needs to update the app to support Dolby Vision and surround sound like it has on the Fire TV Stick and Android TVs.

Verdict

If gaming, along with content consumption is a priority for you, then it doesn't get better than the LG GX. The TV has all four HDMI 2.1 ports, making it ready for the Xbox Series X and PS5. The GX has a sleek and stellar design, fantastic picture performance for HDR content consumption and decent audio considering its slim profile. The UI is as good as ever, with the improvements to WebOS in all the right places. The only downside to the TV is that once you mount it, cable management is a hassle.
