Oppo Watch

The ultimate WearOS smartwatch?

Ahe Oppo Watch is the first smartwatch from the company's stable that aims to punch above its weight. At first glance, it seems eerily familiar to the Apple Watch. While Oppo's smartwatch runs on Google's WearOS, the design takes a page or two out of Apple's book albeit with its own spin. The Oppo Watch feels solid and feels premium while you hold it in your hand, which can't be said for all Android smartwatches. You get all the necessary fitness features with the Oppo Watch as you'd expect but is it the ultimate Android smartwatch, we find out.

Build and Design

Starting with the look and feel, this smartwatch has an aluminium alloy frame with the 46 mm variant going for a ceramic back with a plastic sensor module. It measures 12.96 mm in thickness and weighs around 39 grams without the straps.

There's a home button on the right edge along with a smaller multifunction programmable button with recessed green accent, for easier identification. The buttons aren't too rigid and have decent feedback. On the left side, there are two cutouts for the speaker unit. Moreover, the Oppo Watch is 5 ATM certified making it water-resistant to upto 50 meters underwater for 10 minutes

The 46 mm variant features a 1.91-inch AMOLED screen that curves neatly towards the edges, meeting up with the aluminium chassis. The AMOLED screen on this smartwatch offers upto five modes of manual brightness control and we found ourselves keeping the brightness levels at 3 when indoors and it also offers great sunlight legibility. In our use, we didn't face any major lag or stut-

tering when it comes to interacting with the watch and it felt snappier most of the time.

Features

Being a WearOS smartwatch, there's Google

Assistant onboard for your service and can be used simply by giving voice commands. Oppo Watch offers real-time heart rate monitoring keeping a track of your vitals and sends out an alert in case of any irregularities. The sleep tracking system monitors the user's sleeping pattern and provides actionable insights on the stages and kind of sleep from the previous night. It doesn't record REM sleep or heart rate during sleep and while we didn't have a reference device, the sleep data collected by the Oppo Watch was in line with my everyday sleep cycle. However, for some reason, the watch only monitors the sleep cycle between 8 PM to 10 AM, which is a bummer as it cannot be modified in settings.

There's a breathing mode that helps users de-stress by taking them through a guided exercise session that can be customized to upto 5 minutes and 35 breaths. Additionally, the watch will automatically remind users to get up if they have been sitting for over an hour in the

same place. During our regular use, we found the step counter to be pretty accurate as it is capable of recording your walks and runs instantly. Having said that, if there's a need for detailed metrics, you'd be much better off with a tracker from Garmin or Fitbit.

Battery life

The Oppo Watch 46 mm has a 430 mAh battery that the company claims will last upto 36 hours in the normal mode and upto 21 days on Power Saver mode. In our use though, the Oppo Watch with always-on display and heart rate monitor enabled and connected to the phone over Bluetooth, we got around 18-20 hours of battery life on a single charge. Apart from that, the Oppo Watch uses a pogo-pin magnetic connector that supports VOOC fast charging solution and was able to fully recharge the battery in 60-70 minutes.

Verdict

The Oppo Watch is a solid first attempt by the company in creating an Android smartwatch. It looks great, feels premium in the hand, has a gorgeous display that can be customised with different watch faces and comes pre-loaded with tons of fitness and activity tracking features. The Oppo watch is a decent enough offering, but for its price, there are other smartwatches such as those from Amazfit, Samsung, TicWatch and even the latest Mi Watch Revolve that are more dependable and value for money. Having said that, we are definitely intrigued by the Oppo Watch and can't wait to see what the company does with the next generation of its smartwatch.
