Powered by a Snapdragon 888 SoC, the company's latest flagship is rumoured to launch in February 2021. <http://dgit.in/jan21-46>

Mi TV QLED 4K

Bringing flagship features to the masses

Price
₹54,999

T

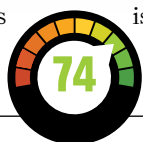

he Mi QLED TV brings with it some interesting features. To

begin with, it supports HDR 10+, a feature we have seen on limited flagship TVs. It also supports eARC (Enhanced Audio Return Channel) and ALLM (Auto Low Latency Mode)

both of which are features of HDMI 2.1. With a QLED display, some flagship features and some Xiaomi special sauce thrown into the mix, has Xiaomi redefined the 50K TV once again? Let's find out.

Build and design

Moving over to the design of the Mi QLED TV 4K, the TV has an aluminium alloy frame with sandblasted coating, giving it a premium finish. The bezels surrounding the TV are also very slim on three sides much like the Horizon Edition Mi TVs Xiaomi launched earlier this year. The TV has a 96% screen-to-body ratio and at the back, the TV has a carbon finish. The TV isn't as slim as the Mi TV 4, but it is slimmer than what we saw on the Hisense A71F we reviewed earlier this year. You can wall-mount the TV but if you decide to keep it on a table, it stands firm with 2 metal feet. There

is enough place below the TV to place a soundbar or set-top-box without hampering the viewing experience.

Display and Picture Quality

As the name suggests, the Xiaomi Mi QLED TV 4K brings with it a quantum dot layer between the

backlighting and the display to give you richer colours - QLED display. It supports a 4K resolution with support for HDR 10, HDR 10+ and Dolby Vision. One of the unique things about the Xiaomi TV is that in addition to traditional picture modes and picture controls like brightness, contrast, hue, colour temperature, gamma, etc. it also lets you choose the colour space such as DCI-P3, BT 2020, BT709, etc. giving you more customization control over what you are watching.

Gaming performance

The Mi QLED TV 4K supports HDMI 2.1. Since the TV has a native refresh-rate of 60Hz, it doesn't support VRR (Variable Refresh Rate). It does, however, support ALLM (Auto Low Latency Mode) and while we can't measure the exact ms response time of the TV, Xiaomi says the TV has a 5ms response time when

gaming in 4K at 60Hz, which is impressive. The gaming performance on this TV was detailed, rich and immersive. However, the green tint issue presented itself when playing Assassin's Creed Valhalla. But in other games, be it Gears 5, or Dirt 5, we got punchy colours and swift response time that gave us an immersive gaming experience.

Audio performance

The Xiaomi Mi QLED TV 4K has 30 W of sound output divided into six drivers - four full-range drivers and two tweeters. While you won't get room-shaking bass from this TV, what you will get is clarity. The vocals are clear on this TV. So, if you watch content like TV shows or documentaries, you should be fine with the TV speakers. Even for mixed performance in an action movie with a background score, bangs and swishes and some dialogue, there was a clear distinction between the sounds. If you are looking at this TV as a bedroom TV and don't want to invest in a soundbar, know that you can get by with the audio performance. At about 40-45% volume the speakers on this TV delivered room-filling sound.

Verdict

The Xiaomi Mi QLED TV 4K brings with it a good panel for consuming content. Its SDR and Dolby Vision content performance is good, with HDR 10 content seeing some hiccups. The TV brings with it HDMI 2.1 features like ALLM and eARC, making it future proof and an attractive proposition for gamers on a budget. It has a good build, fluid UI and easy to use remote control. If you are looking for a 55-inch TV for a budget of 50-60K, you can definitely consider it.
