

Samsung MicroLED 110-inch 4K TV

Samsung is no stranger to massive TVs. Only recently they unveiled their massive 292-inch TV, dubbed The Wall. In addition to being exorbitant, the only other drawback of The Wall was how limited it was, with only a select few in the entire world actually getting their hands on one. Samsung plans to rectify that with a brand new 110-inch 4K TV, which

will use the same MicroLED technology present in The Wall. The supposed next big innovation of the TV industry, MicroLED tech will only launch globally in the first half of 2021, and as of right now is only available for presale in South Korea. MicroLED uses micrometer-sized LED lights to eliminate the backlight and color filters utilized in conventional displays. Instead, it is self-illuminating — producing light and

color from its own pixel structures. Additional details for the new TV are yet to be announced by Samsung, this includes pricing and availability, but what we do know about the TV so far is that it will have an incredible 99.99 percent screen-to-body ratio and that it will come with the Majestic Sound System inbuilt, which delivers 5.1 channel sound without any external speakers.

Excalibur Spider Huracán STO

Roger Dubuis has expanded its line-up of sports car inspired timepieces with the new, limited edition Excalibur Spider Huracán STO. Themed after the recently revealed, limited-edition Lamborghini Huracán STO. One look at the watch and you'll be able to see the similarities in design elements, including the striking colour scheme. The two prominent colours, Blue Laufey and California Orange, are featured prominently on the watch and various parts of the watch, including the dial, bezel and strap. The entire watch is housed in a 45mm carbon case with a black DLC titanium bezel. The watch's RD630 caliber is skeletonized, so you can see the mechanism at work inside the watch. The motif uses a honeycomb design, also inspired by the new Huracán.

The RD630 caliber was designed by Roger Dubuis specifically for its line of Lamborghini-inspired watches. The reason being that the mechanism is designed in a way that's very similar to the Huracán's wheel, and reproduces the same kind of "speed effect". The bridge is designed like a strut-bar, which is inspired by the kind seen on V10 engines — also used in the Huracán. Only 88 of this watch will be made, each priced at \$56,500.

Bugatti Royale

Bugatti has partnered up with German audio brand Tidal, to debut a range of floor-standing loudspeakers, dubbed "Royale". Named after the Bugatti Royale, a limo that was released back in the 1930s. Only 6 of the Royale's were ever made, of which only 3 were actually purchased. This is because of the Great Depression. At the time, possibly even now, the Royale was the pinnacle of luxury and comfort. With the Royale speakers, Bugatti and Tidal hope to convey just that.

The Royale speaker is massive in size, standing 56.6-inches tall and weighing 352 pounds. The design is naturally inspired by Bugatti hypercars, with a rounded design made using supercar-grade materials. Each individual speaker comes with four long-throw subwoofers and two front woofers with aluminium diaphragms. The Royale features its own built-in amplification, so you won't need a separate amplifier and preamp. Tidal are offering two limited-edition versions of the Royale, Edition Blanc and Edition Noire, and they will only be making 15 of each. Of course, each speaker is also fully customisable, with customers being able to choose the kind of finish and materials that will be used.
