WHAT'S NEW

India asks WhatsApp to withdraw new Privacy Policy

Weeks after WhatsApp issued a notification to most global users about its new privacy policy, the Indian Government has asked the Instant Messaging company to withdraw the policy over concerns regarding privacy. The Ministry of Electronics and Information Technology (MeitY) has asked WhatsApp to respond to a set of 14 questions related to privacy and data sharing across platforms. India has the largest user base for WhatsApp in the world with over 400 million users. It was also unveiled that WhatsApp was not extending the new policy to European markets since the privacy laws in Europe

are far more stringent. This differential treatment was also one of the key factors which led to the Indian Government's decision.

"Be it WhatsApp, be it Facebook, be it any digital platform, you are free to do business in India, but do it in a manner without infringing upon the rights of Indians," Prasad said at the inaugural session of the India Digital Summit (IDS), organised by the Internet and Mobile Association of India.

Google unions across the globe form alliance

Google unions across the world have announced a global coalition called Alpha Global. The coalition comprises 13 different unions from across 10 countries. Workers from Google's US and Canadian offices had recently formed a union called the Alphabet Workers Union which is a minority union affiliated with the Communications Workers of America. Alpha Global now includes

unions from the United States, Switzerland, Canada and the United Kingdom, and includes not only employees but also

contract workers. However, the coalition will not have any legal agreements with Google but that does appear to be in their

long term plans. The union has several plans including getting Google to sign a neutrality agreement which would force

Google to support attempts to unionise, and to tackle global issues. Next step would be for the Union to elect a steering committee

which will include members from the union organiser as well as Google workers.

Twitter launches 'Birdwatch' to combat fake news

Twitter has launched a new feature that encourages users to discuss and add context to tweets which they believe are misleading or false. Users with accounts tied to a real phone number and email ID will be the first to get access to the birdwatch program.
