

SECURITY WATCH

DreamBus botnet targets Linux systems

Zscaler's ThreatLabz research team began tracking a new botnet named DreamBus that installs the XMRig cryptominer on enterprise-class Linux and Unix systems. The botnet is deployed in order to use the computing power of these systems to mine Monero (a privacy-focused cryptocurrency). DreamBus has the ability to spread rapidly across the internet and moves laterally once it is inside a targeted system, as per ThreatLabz's report. Based on the timestamps of the deployment of new commands, Zscaler believes that the attackers are stationed in Russia or Eastern Europe. The attackers are targeting Linux-based systems since they are softer targets than Windows-based systems, as per the researchers. The report states, "This is, in part, is because Linux-based malware is less common than Windows-based malware, and thus receives less scrutiny from the security community".

MOBILE WATCH

Xiaomi Mi 11

The Xiaomi Mi 11 is coming soon to India. The phone was launched on December 28 in China as the first phone powered by the Qualcomm Snapdragon 888 processor. The Xiaomi Mi 11 features a 6.81-inch QHD+ display that uses an AMOLED panel with support for 120Hz refresh rate. As mentioned earlier, the phone is the first to be powered by the Qualcomm Snapdragon 888 processor. This is paired with up to 12GB RAM and 256GB storage options to choose from. The Mi 11 also has a triple rear camera setup that consists of a primary 108MP camera, a 13MP ultra-wide-angle camera and a 5MP macro camera. On the front, there is a 20MP selfie camera. Xiaomi has equipped the Mi 11 with a 4,600mAh battery that supports 55W fast charging and 50W fast wireless charging.

APP WATCH

AirMusic

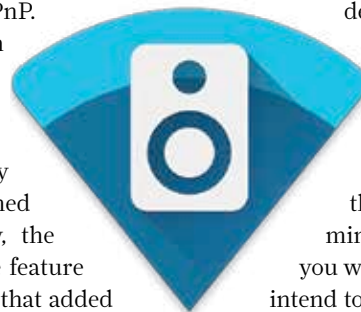

Historically, the Apple ecosystem has been walled off to anything non-Apple, making it an exclusive club of sorts. More recently, however, the company has been more open to allowing TV manufacturers into its AirPlay and Apple TV platforms. Still, for the most part, the support for these services has been absent from the Android universe. Enter AirMusic. The developer of this app has been able to find a workaround solution for this and get AirPlay on Android, with a few

caveats. AirMusic is a nifty app that allows you to stream your local media to anything, including Apple AirPlay devices. Not only that, the app also supports Google Cast, Roku, DLNA, Sonos, AllPlay, Samsung Multi-room, FireTV, and UPnP.

It also works with music streaming, so you can stream from any Android app to devices that have any of the aforementioned receivers. Essentially, the app makes use of the feature added in Android 10 that added support for screen recording with internal audio, so the app just pulls the audio feed from the stream and sends it over to the device of your

choice running one of the casting protocols we mentioned above. So, unfortunately, this app only works with devices running Android 10+ without root. Every phone running Android 9 and below will have to root their

device to make use of this service. The app is available on the Google Play Store for a free trial. You will be able to try out the app for about 10 minutes for free and then, you will need to go Pro if you intend to keep using it. The pro app costs \$4.49, which is not too steep, especially if you've always wanted AirPlay support for your Android device.

Slopes

Slopes is a tracking app for snowboarders that lets users track stats such as top speed, highest altitude, longest run, and more. It also comes with a map feature for users to see a visual representation of their run.

Discovery+

Discovery+ is a new streaming platform that has TV shows from a bunch of channels including Discovery, Food Network, HGTV, TLC, Animal Planet and a few others at \$4.99 per month (with ads) and \$6.99 per month (with no ads).

Mangamo

Mangamo is a manga provider app that boasts over 1,000 manga including popular titles such as Attack on Titan, Fairy Tail, The Seven Deadly Sins, and others. The app has some original manga series as well.
