consider spam into a beneficial interaction between two parties! Ringler is a unique product, a contextual communication platform that aims to improve the quality of voice call interactions between businesses and their customers, “founded in 2018, Ringlerr is a New Delhi based cloud communication platform offering a real time business-consumer engagement tech solution. We do offer a suite of cloud communication APIs & SDKs empowering businesses to use world’s 1st ever verified contextual communication technology and enable businesses to make real time engagement with their consumers over phone call. It is solving interesting communication problem in the \$1 billion Indian cloud communication market. Our vision is to empower this world with Safe, Clutter free and transparent voice communication experience.” We wanted to understand more about the specific problems being solved, “Over 60% consumers prefer talking to real human agent over call to deal with complex queries and complaints. As per Google’s recent report, businesses therefore have to spend \$1.3 trillion on 265 billion customer service calls each year but yet 87% users do not answer business calls. With consumers overwhelmed by endless spam (Avg. 25 spams in a month – Truecaller report 2019), brands find it more and more difficult to connect with their interested customers over phone call for legitimate purposes. This is because consumers see unknown numbers as spam and do not trust and feel unsafe while getting such unknown calls but the real point

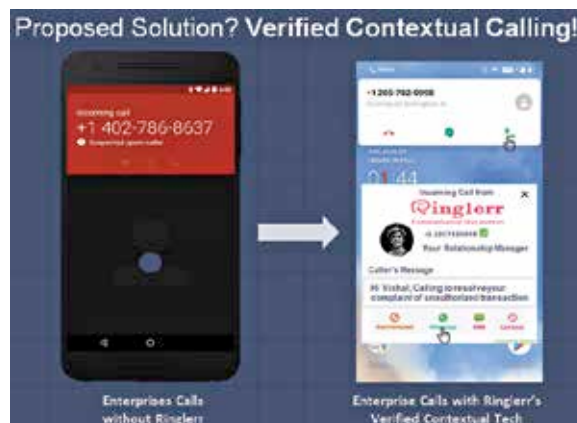

is that not all enterprise calls are spam, Right?” Ringlerr then goes on to explain their solution, “to solve this big communication problem, we have built Ringlerr which now empowers brands to make verified and personalized contextual calls to their

consumers which mean letting end users know why business is calling them. This is possible by displaying caller identity with verified number and brand logo, as well call reason on the consumer’s mobile screen while they receive a call so that end users can differentiate business calls from other unknown calls and can trust the caller and respond quickly.”

Ringlerr also uses the tech to increase the ROI on marketing, “with Ringlerr, brands are now able to come across as genuine caller in the eyes of their consumers. Consumers can now recognize business calls and hence respond faster to business calls. This in turn helps brands to increase their call answer rates by 20-25%. This will further increase overall sales funnel by 30-50%, marketing ROI by 70-100% and reduces service resource cost by 20%”. Ringler’s work is focused on filling a number of communication gaps, “in today’s world, voice communication has become cluttered, unsafe and lacks authenticity due to bombardment of unwanted spam and scam calls.

As a result, brands are not able to make real time connect with their consumers. To bridge this gap of trust, authenticity and transparency between brand and consumers, Ringlerr empowers businesses to let their consumers recognize and trust them while getting call.”

Finally, we wanted to better understand the experience for the startup of going through the Nexus program. “For us, Nexus has been a great experience. We were doing too many things without a structure and sharp focus, but Nexus helped us sort out our priorities and cut down clutter to focus on things that matters the most. Sometimes you need an outside-in perspective to help you move towards your goal by quickly identifying your critical bottlenecks and biases, Nexus has been game changer for Ringlerr. We are very much thankful to the whole Nexus team, specially Erik (Erik Azulay, Executive Director at Nexus Incubator) sir whose 1-2-1 mentorship actually allowed us to focus on things which mattered the most at that point of time. Nexus team was kind enough to support us by providing their state of the art office space where we could work with our team and could invite our clients

Ringlerr in action

for meetings besides providing us enough resources like laptop, printer, wifi, conference rooms, event space etc. According to us, Nexus has been one of the best incubator programs and has been contributing a lot towards Indian Startup ecosystem. Nexus has been setting up the benchmark and other incubators should learn the best practices Nexus team follows to deliver high quality and personalized support to each startup.”
