

desired subreddit and tweak the URL a bit. Simply add the letter 'p' after Reddit in the URL. For example, if you are checking out r/photography, the default link is <https://www.reddit.com/r/pics/>. Now, to change it into a slideshow, simply edit the link to "<https://www.redditp.com/r/pics/>". The subreddit will now turn into a slideshow and it will automatically move to the next picture in a few seconds. You can tweak this as well and set your own timer to move to the next image. Additionally, you can also make the slideshow enter fullscreen mode by editing it in the 'plus' tab on the bottom right of the screen.

GET TO SUBREDDITS QUICKER

For those who are relatively new to Reddit, you may not know that there is a simpler way to get to subreddits instead of typing out the full URL such as [reddit.com/r/pics](https://www.reddit.com/r/pics/). You can make this URL much shorter and only type out [pics.reddit.com](https://www.pics.reddit.com) and you

will have reached the same subreddit. You can do this for any subreddit on the platform. Simply replace the first entry in the shortened URL. For example, you can search for the smartphone subreddit by simply typing out '[smartphone.reddit.com](https://www.smartphone.reddit.com)' and it will take you to the page immediately. Pretty nifty, right?

ACCESS REDDIT EVEN IF IT IS BLOCKED

Sometimes workplaces can place some restrictions on particular sites, especially social media sites. However, if you do want to get around these kinds of restrictions and access Reddit, you absolutely can. Instead of heading over to the default [reddit.com](https://www.reddit.com) URL, you will need to use this web address instead - <https://pay.reddit.com>. This website can bypass most web blockers, so chances are, wherever you are, you should be good to go. If specific subreddits are banned instead of the entire website, just add a

“+” at the end of the URL. So, the URL will be in this format - [reddit.com/r/subreddit+](https://www.reddit.com/r/subreddit+) (insert the name of the subreddit before “+”).

ENHANCE YOUR REDDIT EXPERIENCE

If you want to take your Reddit browsing experience to the next level, installing the Reddit Enhancement Suite ([redditenhancementsuite.com](https://www.redditenhancementsuite.com)) on your browser is the way to go. Installing the Reddit Enhancement Suite will give you access to a bunch of different tools such as logging into multiple accounts, infinite scrollable homepage, an in-line image viewer, username hider, and others. You will also be able to use keyboard shortcuts to seamlessly control Reddit. Some examples of shortcuts include Z for downvote, A for upvote, F for refresh, C for open post, U for user, and a bunch more. To browse all the features you can access with the Reddit Enhancement Suite, you can head over to this link (<http://dgit.in/RES>) and check them all out.

SWITCH REDDIT WITH IMGUR TO EASILY BROWSE IMAGES

A fun fact to note is that the popular image hosting and sharing site Imgur also has subreddits. The website is especially popular with

Redditors and most images present on Reddit are, in fact, hosted on Imgur. So, if you simply want to check out the images of particular subreddits, much like the slideshow feature we mentioned above, you can use Imgur's subreddits to just see the pictures alone. All you need to do is replace “reddit” in any subreddit's URL with “imgur”. Now, you will be able to see a gallery of images from this subreddit on Imgur itself.

GET LIVE UPDATES ON COMMENTS

If you want to keep up with the massive inflow of latest comments on popular posts in real-time, you can utilise Reddit Stream. It will show you the comments on the post chronologically so you never have to miss another comment on a topic of interest to you. Reddit Stream looks very similar to a simple chat log and all the comments appear in this “chat log” as soon as users post them. This is especially useful when you want to keep up with the comments coming in for a live event of some kind. You can access Reddit Stream by adding “-stream” after reddit in the URL. So, the URL will look something like this - www.reddit-stream.com/r/subreddit_name/comments/article. You can even log in here and reply to the comments right from this page.
