

Oppo Smart Tag

Oppo is working on its own Bluetooth Smart Tag tracker, might be unveiled alongside the Find X3 series. <http://dgit.in/feb21-63>

Realme C20 Launched

Running on a Helio G35 processor and a single camera setup, the budget smartphone has launched in Vietnam. <http://dgit.in/feb21-64>

Oppo Reno5 Pro 5G

Looks great, works great

T

he Oppo Reno5 Pro 5G is the latest to launch from Oppo's stables, packing the

MediaTek Dimensity 1000+ SoC. If you're questioning if this a phone is worth your hard-earned money, you can find the answer in this review.

Build and design

The Oppo Reno5 Pro 5G is a gorgeous smartphone. The Astral Blue colour utilises a unique treatment process called Reno Glow. This process involves Oppo's R&D team figuring out how to grow crystals on AG Glass in a manner that makes the back glisten. Another advantage is that it is resistant to fingerprints as well. The SIM card tray sits at the bottom, next to the USB-C port while the volume and power buttons reside on the left and right sides of the frame.

Display and sound

The Oppo Reno5 Pro 5G features a 6.5 inch AMOLED panel with a peak brightness of 1100 nits when playing back HDR content, and a regular peak brightness of 660-nits as measured by us. The 90Hz refresh rate definitely helps improve the experience by making all animations and transitions a lot smoother. The Reno5 Pro 5G's display is also HDR10+ certified, with Netflix HDR certification on the way and YouTube HDR support being available right out of the box.

On the Reno5 Pro 5G, the curvature of the screen doesn't lead to a lot of ghost touches, leading us to believe that Oppo has the rejection algorithms pretty well sorted.

Where we do have complaints, however, is the sound. The phone has a single bottom-firing speaker and doesn't provide the sound you'd expect from a smartphone that feels so premium.

Camera performance

The Oppo Reno5 Pro 5G features a quad-camera setup on the back, with the 64MP primary camera being at the heart of it. The 8MP ultra-wide camera unfortunately doesn't feature auto-focus. The Macro lens is incredibly

difficult to get usable results out of due to the lack of AF or focus peaking.

The main highlight of the Oppo Reno5 Pro 5G's camera stack isn't the still capabilities, but more important the videos. The Full Dimension Fusion Portrait Video system is an AI tool that once turned on, dynamically adjusts the algorithms to result in better photos. While having this kind of AI takes the guess work out of good quality videos, the results though can be hit or miss. While shooting in low light, there's a lot of noise in the videos, irrespective of whether its shot using the Ultra-Low light mode or not. However, videos shot indoors in a decently lit living room turn out fine. With Live HDR, the results aren't as dramatic as the HDR effect in photos, but we did see better colours and somewhat better dynamic range in some of the shots.

Performance

The Dimensity chipsets from MediaTek mark the company's entry into the flagship SoC segment. The Oppo Reno5 Pro 5G is powered by the MediaTek Dimensity 1000+ chipset which, in our testing, helped the Oppo Reno5 Pro 5G deliver some impressive numbers.

In our testing, we also tried to verify if the SoC was being clocked to its maximum, ignoring thermal constraints. MediaTek processors in the past have been caught doing this. In order to verify CPU state, we use

GameBench, our tool for measuring gaming performance. This tool records the state of each CPU Core, allowing us to verify if the Dimensity 1000+ was being clocked up to max when it detected a benchmark running. Long story short, the cores do not clock up, and run in accordance with the load they're put under. This reflects in the usage of the phone as well, where we note excellent results, free from stutters and freezes.

Verdict

The Oppo Reno5 Pro 5G makes a compelling case for you to spend money on it. It might sport a MediaTek Dimensity 1000+ SoC, but make no mistake, this chip goes toe-to-toe with the Qualcomm Snapdragon 865. However, the device falls short of being perfect, on account of the use of a mono speaker with poor sound output.
