LG ROLLABLE PHONE

The LG Rollable phone was showcased during the company's press conference at CES 2021. The digital LG Press conference began with a

rollable screens that go into making the LG Rollable phone. BOE is one of the major manufacturers of displays that are used by TVs and smartphones, including foldable

person holding the LG Rollable in their hands, and on the screen of the phone, Jin-hong Kim (JK), SVP, Head of Global Marketing Center at LG kicked off the presentation as the phone expanded vertically. It looks rather ingenious and sets a perfect use case for this new form factor.

The company also went ahead and confirmed the name "LG Rollable" that's been rumoured to be under development under the Explorer's Project. Shortly after the LG Rollable teaser went viral, a spokesperson for LG confirmed to Nikkei Asia that the LG Rollable phone will be launched this year. "Our management wanted to show that it is a real product, as there were many rumours around the rollable phone. As it is released at CES 2021, I can tell that it will be launched this year," Ken Hong, a spokesperson for LG told Nikkei Asia.

Moreover, the report also cites an industry source that claims that LG is working with BOE for the

inch rollable display with 20:9 aspect ratio similar to the Oppo X 2021 concept smartphone. The device is also said to have a video mode with 16:9 aspect ratio along with a productivity mode that offers 3:2 aspect ratio. The exact display specs remain unknown but if we had to guess, the LG Rollable phone could use an OLED display with a variable size that can go between 6.7-inches to 7.4-inches. The phone is expected to be powered by the Qualcomm Snapdragon 888 processor with 16GB RAM and 256GB storage options. It is rumoured to be equipped with a 4,200mAh battery, likely with support for fast charging.

KYOCERA DURAFORCE ULTRA 5G UW

Known for its lineup of durable smartphones, Kyocera unveiled the DuraForce Ultra 5G UW at CES 2021 virtual conference. The UW in the smartphone's name stands for Ultra Wideband, which means the smartphone will work with Verizon's high-speed Ultra Wideband 5G network in the US. The UW network is based on mmWave 5G and has download speeds in excess of 1 Gbps. The Kyocera DuraForce Ultra 5G UW's primary appeal is its ability to withstand rough treatment. Not only does it come with dust and water

screens. The company has worked with Huawei previously for the company's Mate X foldable phone and has provided displays for other LG smartphones as well.

According to previous reports, the LG Rollable could have a 7.4-

OTHER SMARTPHONE LAUNCHES

1. TCL 20 5G, TCL 20 SE and TCL Rollable concept

TCL introduced a few phones from its 20 series at CES 2021. The company unveiled two handsets including the TCL 20 5G, a budget phone with 5G connectivity for a fairly affordable price of \$360, and the TCL 20 SE, and even more affordable smartphone (priced at \$180) without 5G. The company also teased a concept rollable phone at CES. However, it doesn't have a name nor a release date on the horizon.

2. Moto G Stylus 2021 and Motorola One 5G Ace

Motorola announced a new series of smartphones ahead of this year's virtual CES 2021, and there's a phone for every budget in its new G family of devices. The new phones include the Motorola One 5G Ace, a mid-range 5G smartphone, and the Moto G Stylus 2021, a refined version of the first G Stylus that debuted in 2019.
