

resistance, but also MIL-STD810H rating which signifies that the phone can withstand a 1.5m drop onto concrete without cracking. The phone also sports a scratch-proof Sapphire Shield display that can withstand extreme temperatures and extreme environments. To add to this, the smartphone is also HazLoc certified, so it is protected in Class 1, Division 2 classified hazardous locations. In simple words, the DuraForce Ultra 5G UW

is a tank of an Android phone. In addition to its durability chops, the phone sports a Qualcomm Snapdragon 765G chipset, alongside a 5th generation AI engine which allegedly enhances network performance. There are two rear cameras including a 24MP main sensor with dual-LED flash and a 16MP wide-angle lens. On the front, you have an 8MP selfie shooter. The camera system also comes packing a ToF sensor for faster auto-focus, and Super Night Vision mode. The camera stack can also capture photos and video underwater.

Powering the smartphone is a 4500mAh battery and you can recharge the phone either via USB, Qi wireless charging or charging contacts on the back of the device. As per the company, the battery inside the phone is durable as well and can absorb the same shocks as the rest of the device. The smartphone also comes equipped with programmable buttons on the side of the device that launch push-to-talk or emergency SOS calling. 

HOME APPLIANCES

LG INSTAVIEW REFRIGERATORS

LG debuted its new lineup of InstaView Door-in-Door refrigerators ahead of CES 2021. These refrigerators feature a hygienic water dispenser, tailor-made for the COVID-19 times. The refrigerators come with a translucent glass panel that illuminates when you knock on it, making the interior of the fridge visible. This is done so you can simply take a peek at the contents of your refrigerator without opening the door constantly to prevent cold air loss. The InstaView window was seen in previous LG refrigerators, however, for the 2021 range, the window has been enlarged by 23 per cent, so you can see more of the interior.

LG's spherical Craft Ice maker, that crafts up perfect spherical ice cubes, will also be housed within this lineup of refrigerators. Select models will also come with voice recognition technology as well which allows for hands-free features such as Amazon Dash Replenishment. This feature allows the appliance to check its product levels and automatically reorder supplies as needed. The voice recognition in this generation of refrigerators also supports the 'open the refrigerator door' command. The refrigerators employ LG's 'UVnano' technology to reduce up to 99.99 per cent of bacteria in the water dispenser. The door-in-door feature is essentially a smaller section of the fridge that is accessible via a hatch, allowing you to easily reach for more commonly-used items.

KOHLER SMART STILLNESS BATH

Kohler took the virtual stage at CES 2021 to unveil a new smart bathtub that transforms your bathroom into a luxurious at-home spa, of sorts. Drawing inspiration from Japanese forest bathing (*shinrin-yoku*), the Kohler Smart Stillness Bath is designed for an immersive experience to help "relax the mind, soothe the body, and renew the spirit", as per the company. The tub uses a combination of fog, full-spectrum lighting and aroma generated by essential oils to recreate a spa-like environ-

ment in your own bathroom. A version of the bath dubbed the 'Infinity Experience' will fill the tub with water from the bottom which then spills over into a wooden moat to create "relaxing" sounds. You can also easily customise every element of your bath-spa experience through the Kohler Konnect app. What's the price of such a luxurious unit, you ask? The Stillness Bath ranges in price from \$6,198 all the way to \$15,998!

PANASONIC NANOE EH-NA67-W

Panasonic introduced a new entry in its Nanoe hair dryer line at CES, the Panasonic Nanoe EH-NA67-W. This dryer promises to reduce hair damage from everyday brushing thanks to its Nanoe technology. According to the company, its patented Nanoe technology is capable of pulling moisture from the air to dry your hair while keeping it hydrated and healthy. Regular hair dryers usually work with negative ions to dry hair, whereas the EH-NA67-W uses the Nanoe technology to blow moisture-rich particles. These particles are almost 1,000 times more packed
