V-MODA M-200 ANC

V-MODA made a splash at CES this year with the V-MODA M-200 ANC wireless headphones. This is a new version of the company's already-existing M-200 headphones which bring both wireless connectivity and ANC to the classic V-MODA M-200. The headphones look pretty similar to their wired counterpart, with a hexagonal design, that is a signature for the company. The M-200 ANC comes equipped with 40mm drivers, new buttons for controlling playback wirelessly and a USB-C charging port. They are

also slightly heavier than the classic M-200, weighing 320g compared to the 290g on the wired model. It offers hybrid noise cancellation with an option to adjust the levels of ANC via an accompanying app. The new M-200 ANC headphones are priced at \$499.99.

SOUNDCORE LIBERTY AIR 2 PRO

Anker revealed its first truly wireless earbuds with noise cancellation at CES 2021 dubbed the Soundcore Liberty Air 2 Pro. The earbuds come packed with features such as sound personalisation, multiple ANC modes, wireless charging, 34 hours of total battery life, and others, all at an attractive price point of \$130. The earphones feature what

the company calls 'targeted' ANC, where certain modes optimise the ANC for particular instances such as commute, outdoor and indoor. The battery life is rated at 7 hours on the earbuds and a total of 26 hours with the charging case.

AMPERE SHOWER POWER SPEAKER

While most modern-day portable speakers come with a high IP rating for water resistance, allowing you to listen to some tunes when showering, the Ampere Shower Power Speaker takes it a notch higher. The Shower Power is a hydro powered, waterproof Bluetooth speaker that clamps in place above your showerhead and gets powered with the flow of water! The device made its debut at CES 2021 after successful runs on Kickstarter and Indiegogo. Once the speaker is clamped in place above the showerhead, the flow of water will spin an internal impeller within the speaker that is connected to a

mini-generator, keeping the device powered. Powered by a 2600mAh Lithium-ion battery, the speaker lasts for 20 hours at full charge, and your daily shower is enough to keep it powered so you'll never really have to remove it and plug it in, according to Ampere. The speaker also houses physical buttons to control music playback and comes equipped with a nifty waterproof remote, in case your showerhead is too high up to reach. Sporting 40mm drivers, this 5W Bluetooth 5.0 speaker utilises Ampere's proprietary 'sound wave' diffuser technology that provides 360-degree sound for a more immersive experience, despite its compact form factor. On top of all of this, the Ampere Shower Power Speaker is made from 100 percent recycled plastic that has been recovered from the ocean.

SENNHEISER IE 300

Sennheiser took to the stage with the Sennheiser IE 300 earbuds at CES 2021. The earbuds are pow-

ered by a refined version of the company's 7mm XWB (Extra Wide Band) transducer. The Sennheiser IE 300's focus is clear – it is sound quality. So, it doesn't come packing features prevalent in the consumer audio market at the moment such as ANC and wireless functionality. The company claims that the components in the buds have been meticulously tuned to refine listening experience right from the optimised membrane foil that minimises vibrations and distortions to the resonator chamber that gets rid of masking resonances in the ears to enhance the highs. The Sennheiser IE 300 will be available starting March and will cost \$299.95.
