

1MORE COMFOBUDS PRO

1MORE took the spotlight at CES once again this year with three of the company's products receiving the 2021 CES Innovation Honoree Award, making 1MORE the most awarded headphone brand at CES of all time. One of the awards was taken home by the 1MORE ComfoBuds Pro True Wireless Headphones. The earphones come packed with features such as four ENC microphones for calls, instant pairing, Bluetooth v5.0

connectivity, auto-pause/play, IPX5 water resistance and the 1MORE sound tuning powered by 13.4mm dynamic drivers. It also comes with 1MORE's QuietMax ANC technology and a low latency entertainment mode. Alongside the ComfoBuds Pro, 1MORE also won the award for the 1MORE ColorBuds, which we have reviewed, and the 1MORE ColorBuds Pro, which comes packing ANC technology.

EARIN A-3

Priced at \$199, the Earin A-3 are tiny truly wireless earphones that are allegedly 20 percent smaller than most other true wireless earphones on the market. They come with an AirPods-style stem and half in-ear design. The company claims that these are the "smallest and lightest" headphones ever made. The buds don't come with silicone tips to create a tight seal within the ear,

however, the company said that this was intentional since they wanted the earbuds to be able to let more ambient sound in to ensure user safety. They come packing a sizable 14.3mm custom driver and each bud houses an accelerometer that picks up vibrations from your head as you speak. This combined with the microphone allegedly improves voice quality when making calls. Since there is no predetermined left and right earbud, the earbuds can detect which ear it is in and assign a left or right channel accordingly. Pretty cool!

JBL CHARGE 5

Kicking off the company's 75th-anniversary celebration, JBL showcased a host of products at CES 2021. One of them being the JBL Charge 5, the fifth generation of JBL's rugged Bluetooth speaker range. The company claims that the speaker offers improved audio over the last-gen

model and has an elevated dustproof and water-resistant design. There's also a built-in USB port that allows you to charge your mobile devices, which means that it can double as a power bank. The company stated that the speaker comes with a "race-track-shaped driver" with a separate tweeter and dual passive radiators which improve the bass performance and clarity over its predecessor, the Charge 4. The battery life is rated at 20 hours and it is also equipped with JBL's PartyBoost feature that allows users to connect it with other compatible JBL speakers and have them all play music together.

JLAB JBUDS FRAMES

JLab launched the JBuds Frames, a set of wireless mini speakers that can attach to the arms of any style

of sunglasses or eyeglasses. The device is priced at \$50. It is essentially an audio eyewear product that aims to combat one of the problems plaguing the category. Usually, these type of speakers are integrated into the glasses frames, which makes it

difficult to mix and match speakers and glasses or use them with existing glasses. JLab, on the other hand, allows you to retrofit the mini speakers onto any form of glasses, so even if you change your glasses in the future, you can still continue to use them. They're IPX4 water-resistant and each unit comes with 8 hours of playtime. It houses 16.2mm drivers to produce sound and the company claims that users will be able to hear the sound clearly without it being audible to those nearby.

JBL BAR 5.0 MULTIBEAM

Launched just ahead of CES 2021, the JBL Bar 5.0 Multibeam soundbar comes with Wi-Fi streaming support including Amazon MRM and simulated Dolby Atmos effects, Alexa and Google Assistant support and a \$400 price tag. It utilises JBL's proprietary beam-forming technology dubbed

'Multibeam' to bounce surround channels off walls. There's an inbuilt subwoofer working alongside four passive radiators to emit punchy bass response, as per the company. Notably, the Bar 5.0 Multibeam will be compatible with Amazon's Multi-Room Music protocol which allows you to group Echo speakers together.
