

proper utilisation of the high-refresh rate panels that they generally ship with.

Pricing

Laptops featuring the RTX 3060 will be priced starting \$999, the RTX 3070 laptops will start \$1299 and the RTX 3080 laptops will start from \$1999 onwards.

NVIDIA RTX 30 Mobile features

NVIDIA incorporates several features to make the RTX GPUs more suitable for mobile form factors. These primarily deal with power, thermal and acoustic management. Here are the features at a glance:

- **Dynamic Boost 2.0:** This is a power management feature which allocates power intelligently between the CPU and GPU based on the dynamic power needs that the currently running task may require.
- **WhisperMode 2.0:** This is another power and acoustic management feature that is customised per laptop model to suit the manufacturer's thermal and acoustic limits.
- **Resizable BAR:** This is a PCIe technology that allows the CPU to access all of the GPU's memory pool providing performance boosts in games that can make use of the same.
- **NVIDIA DLSS:** Perhaps one of the biggest improvements with RTX 30 series is DLSS 2.0 which is an upscaling algorithm that scales high-setting low-res images to fit higher resolution displays. Coupled with NVIDIA's hardware-accelerated ray-tracing feature, this forms a powerful combination.

NVIDIA RTX 3060

NVIDIA's CES offerings weren't limited to just notebook GPUs. The company also announced their latest mid-range graphics card in the 60-class of GPUs with the NVIDIA GeForce RTX 3060. The card will be priced at USD 329 which translates to approximately INR 24,000 and will feature 12 GB of GDDR6 video memory. Folks looking to purchase the new card will have to wait till the end of February 2021. It is unsure if NVIDIA will have Founders Edition cards for the RTX 3060 or if only partner cards will be available. NVIDIA did state that they were working on the stock situation for the new RTX 30 desktop graphics cards. Additionally, NVIDIA is enabling Resizable BAR starting with the RTX 3060 so we should see the launch drivers enabling the PCIe feature across all RTX 30 cards.

"There's unstoppable momentum behind ray tracing, which has quickly redefined the new standard of gaming," said Matt Wuebbeling, Vice President of global GeForce marketing at NVIDIA. He also added, "The NVIDIA Ampere architecture has been our fastest-selling ever, and the RTX 3060 brings the strengths of the RTX 30 Series to millions more gamers everywhere."

Specifications

The NVIDIA GeForce RTX 3060 will sport 12 GB of GDDR6 memory which is more than the 3060 Ti that has only 8 GB of VRAM. NVIDIA's compression algorithm is good enough

to make do with the high-speed low-capacity video buffers but with AMD's RX 6000 launch it's definitely feeling the pressure to include more video memory. The 3060 will use a 192-bit interface and can crunch out 13 TFLOPs for shader performance, 25 TFLOPs for ray-tracing performance, 101 TFLOPs for DLSS performance. More specifications will be released closer to launch but this is what we have so far.

- 13 shader-TFLOPs
- 25 RT-TFLOPs for ray tracing
- 101 tensor-TFLOPs to power NVIDIA DLSS (Deep Learning Super Sampling)
- 192-bit memory interface
- 12GB of GDDR6 memory

INTEL ROCKET LAKE-S AND NEW 11TH GEN CPUS

Intel has announced over 50 processors at CES 2021 for the desktop and mobile form-factors. These include, N-Series 10nm Intel Pentium Silver and Intel Celeron processors; 11th Gen Intel Core vPro and Intel Evo vPro processors, 11th Gen Intel Core H-Series processors for mobile i.e. laptops; and 11th Gen Intel Core S-Series desktop processors

(code-named "Rocket Lake-S"). Also revealed were details pertaining to Intel's Alder Lake processors which will follow Rocket Lake-S.

"Only Intel has the breadth of products spanning multiple architectures; the large, open ecosystem; sheer scale of manufacturing footprint; and deep technical expertise customers need to unlock opportunities in this era of distributed intelligence," said Intel Executive Vice President Gregory Bryant. "With an intense focus on execution for our core products and across our broader portfolio, we're introducing
