Mobile-only plans take off in India

Platforms like Netflix, Spotify and, most recently, Amazon Prime Video have released mobile-only plans in India.

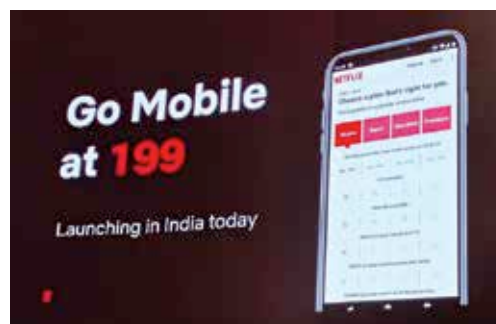

Mayank Sachdeva | mayank@digit.in

In the past eighteen months, massive Over the Top content (OTT) platforms like Netflix, Spotify and, most recently, Amazon Prime Video have released mobile-only plans in India. These are low-tariff plans designed, often exclusively, for the Indian market. These plans can only access content from smartphones and not from any other device. Let's take a look at why these companies are selling content for cheap in India.

WHAT ARE MOBILE-ONLY PLANS?

These are low-tariff plans designed, often exclusively, for the Indian market, for example, Prime Video's mobile-only plan starts from ₹89 and Netflix's costs ₹199. These plans can only access content from smartphones and not from any other device like laptops or smart TVs. They also offer limited quality on their content, for example, video platforms like Netflix and Prime Video are limiting streaming quality to 480p, Standard Definition (SD) and can only be accessed on one device.

Amazon's general manager for Prime Video, Gaurav Gandhi, explained the company's first mobile-only plan by saying, "Given that close to 95% of households in India are single-TV homes, the smart-phone becomes the default screen for video viewing for many in a family. 85% of India's Internet access is mobile-driven, and it is important to note that over 90% of all mobile customers accessing data services are pre-paid customers. We believe that the Mobile Edition plan will further accelerate Prime Video's adoption in India and allow an even larger number of customers to access our popular entertainment content."

Netflix was one of the first OTT platforms to start a mobile-only plan in India
