WHEN IT COMES TO CLOUD STORAGE SERVICES, MICROSOFT'S ONEDRIVE IS ONE OF THE MOST PROMINENT ONES OUT THERE. It is a cloud storage service that is available to anyone with a Microsoft account and it allows users to store files such as documents, photos, videos, and more. While it had a slower start than Dropbox and Google Drive, OneDrive is now efficient enough to rival these big names in the cloud storage business. The service is tightly integrated into Windows 10 and is a part of the Microsoft 365

subscription package that also includes Microsoft's Office suite. The best part is that if you're an Office 365 subscriber, you have a whopping 1TB of cloud storage space. So, if you use OneDrive regularly or even if you're looking into this particular cloud service for the first time, take a look at these tips and tricks to improve your experience with OneDrive.

BACK UP YOUR PC TO ONEDRIVE

If you've got an Office 365 subscription, 1TB of storage is a ridiculous amount of space. One great way of leveraging all that storage space is to back up your PC's contents to OneDrive. To get started, navigate to OneDrive from the Windows Start Menu (Windows 10 only). Next, click on the OneDrive cloud icon in the

Get all your files on your PC backed up on OneDrive

Windows Taskbar. Now, click on More > Settings. A pop-up menu will appear. Click on the 'Backup' tab and then click 'Manage Backup' to choose the folders from your PC that you wish to backup to OneDrive. Once you do that, press the 'Start Backup' button. Now, you'll find all your uploaded files on OneDrive and you can access them on any PC that you are working on as long as you're signed up on OneDrive.

INTEGRATE ONEDRIVE WITH GMAIL

If you wish to attach OneDrive files to your Gmail account, you will need to install the Attachments.me extension on Google Chrome or add-on on Mozilla Firefox. Now, within Gmail, you can click on 'Share from OneDrive' and choose a file from the ones backed up on OneDrive. Once you have selected the file you want to share, it will create a link that can be shared with your email recipients. Do note, these files can be viewed but not edited.

ADD EXPIRY TO SHARED LINKS

If you want to share confidential information via OneDrive that's accessible only for a certain period of time, you can do that with links expiry. With the help of this, you can add a date and time to a shareable link before sending it out. To do this, select the file you want to share and click on the 'Share' button. Now, click on 'Set Expiration' and set the date. Do note that this is only available for Microsoft 365 or Office 365 members and you can do this on the mobile app version of OneDrive.
