

USE BUILT-IN OFFICE LENS

Microsoft has a document scanner app called Microsoft Office Lens for Android and iOS. The company has added the functionality of Office Lens to the OneDrive mobile app as well. To use this document scanner, head over to the OneDrive app and then go to the Files tab at the bottom of the screen. Click on the camera icon and the app will give you the option to scan a document, whiteboard or even a business card. You can save the scanned item as a PDF, image or directly to OneNote, the note-taking service.

MAKE FILES OR FOLDERS AVAILABLE OFFLINE

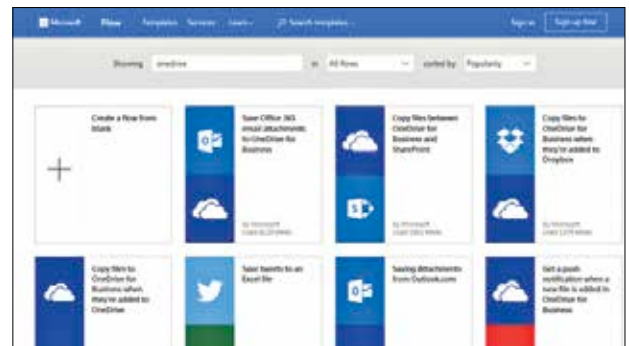

In case you're travelling to a place where you may have a spotty internet connection, it's nice to have important docs handy even when you're offline. OneDrive allows you to mark files or folders for offline usage, so you can access them at any time. Any edits made to

these files will sync the next time your device connects to the internet. To do this, head over to the OneDrive app and click the ellipsis button (...) under any file, picture, video, etc. Now, toggle on the option that says 'Make Available Offline'. The files and folders you have made available offline will have the 'Available Offline' icon in the List view. You can now access these files at any time, even without an internet connection.

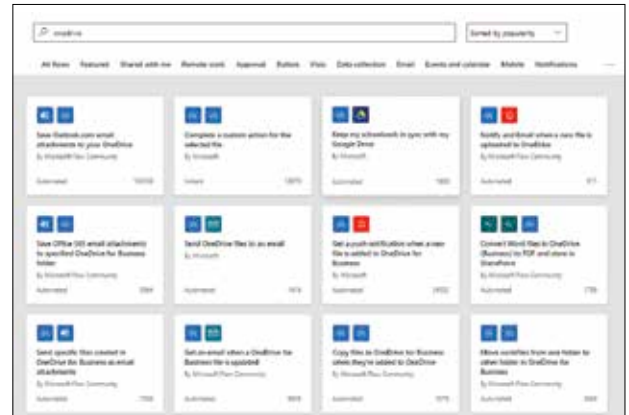

USE IFTTT AND MICROSOFT FLOW FOR AUTOMATION

If you want to simplify small, easy tasks to maximise your productivity when using OneDrive, you can do that by using IFTTT or Microsoft Flow. Let's start with IFTTT. It is a popular web-based service that allows for online automation by using 'applets' that allow various web services to connect and perform functions automatically. With IFTTT, you can automatically save images and screenshots, back up

Use IFTTT to automate OneDrive tasks

your email attachments, or upload images that have been posted to your social media on your OneDrive account. To use the service, log in to your IFTTT account, or create one if you don't have an account already. Now, search for OneDrive and click on the option 'Connect'. Enter your OneDrive username/email address and password and accept the access requirements for IFTTT. Now, you can browse through numerous applets that are provided in the list. Some examples include saving email attachments to OneDrive for Business, saving tweets to an excel sheet, and more. Select an applet and tap to turn it on. Finally, provide your email credentials to start off the automation process.

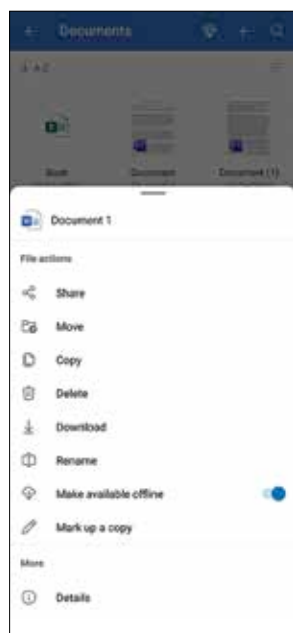

Alternatively, you can also use Microsoft Flow with OneDrive for some automation. It will allow you

to automate tasks such as saving attachments from Outlook, copy files from other cloud storage services, connect to services such as Wunderlist and Facebook, send files to email addresses, and more. To use Microsoft Flow with OneDrive, go to Microsoft Flow and enter your account details. In the search bar, type OneDrive. Now, browse through the list of Flow templates available to find one you'd like to use. Select the template, provide any login information (if asked). A pop-up will appear to ask you for some permissions. Read it and click Yes to accept them. Now, you can activate the template by clicking on 'Create Flow'.
