

Xiaomi Redmi K40

The Xiaomi Redmi K40 series has launched, and is powered by Qualcomm Snapdragon 870. <http://dgit.in/mar21-63>

RedmiBook Pro

The RedmiBook Pro lineup has launched alongside the K40 series in China. <http://dgit.in/mar21-63>

Realme X7 Pro

A reliable workhorse

This year's performance bar is being pushed by MediaTek with its Dimensity 1000+, a 7nm-based SoC, which we are now testing out in the Realme X7 Pro. If you're considering buying this phone, here's everything you need to know.

Build and design

The Realme X7 Pro doesn't break any moulds when it comes to design. The phone feels well balanced in the hand, and the button placement is comfortable to reach. The power button on the right side and the volume rocker on the left make for a good design aesthetic. The black colour is extremely prone to showing fingerprints, and even though it's Gorilla Glass 5 on the back, we would strongly recommend using the supplied TPU case to keep the phone clean and safe. There's no headphone jack and neither is there a MicroSD card slot on this phone.

Display

Realme has gone all out and given users an FHD+ AMOLED display with a refresh rate of 120Hz and a touch sampling rate of 240Hz. These two features combined add to the extremely responsive feel of RealmeOS.

The Realme X7 Pro also boasts of a super bright display, hitting 1200 nits of peak brightness. It is easily usable outdoors irrespective of the lighting conditions. The pre-applied screen protector, however, is a rather poor quality one, as it holds fingerprints very easily and also is prone to hosting reflections.

Performance

Realme X7 Pro is powered by the MediaTek Dimensity 1000+ SoC, with 4 performance cores and 4 efficiency cores. Running the chipset through our standard benchmarking process,

BUILD	70
FEATURES.....	77
PERFORMANCE.....	80
VALUE.....	78

we see that its performance is higher than that of the OPPO Reno5 Pro 5G. Further investigation reveals that this is because when the ROM detects a benchmark, it clocks up the four performance cores to the max. This does, unfortunately, make the benchmark-based comparison unfair.

Our gaming sessions were logged using GameBench with CoD Mobile, Asphalt 9 and even Shadowgun Legends set to their highest graphics settings. Our data looks promising on multiple counts. Firstly, the frame rates for both Asphalt 9 and CoD: Mobile were 60fps average, with 99 percent stability for the former and 100 percent stability on the latter. While gaming, we don't face any performance issues but do notice a build-up of some heat.

With respect to average, day to day use, the Realme X7 Pro feels snappy and surprisingly reliable. Unlike with gaming, the phone does not heat up during day-to-day use.

Camera

The Realme X7 Pro features Sony's new IMX 686 sensor with a 64-megapixel resolution. The smartphone also offers an 8MP ultra-wide camera and two additional 2MP cameras; one macro and one monochrome.

For well-lit daytime shots, you can just simply go ahead and shoot in the 64MP mode without worrying about a loss in image quality. You get shots with good dynamic range.

When shooting in low light, you get very good results with Night Mode. The phone also offers an ultra-low light mode, which for the most part, allows you to shoot images in damn near pitch black. The results of the low light mode are definitely impressive, with very good noise control, impressive dynamic range and no visible colour shift.

When you move onto the ultra-wide lens, the results from the 8-megapixel shooter are definitely acceptable. Perhaps the two most unnecessary additions to the camera stack are the macro and monochrome lenses, which don't find any use beyond the novelty factor.

Battery life

The Realme X7 Pro houses a 4500mAh battery with support for the company's 65W SuperDart charging. Now, with the display set to 120Hz, the phone just barely lasted a whole day of heavy use while the 60Hz mode got us till the next morning. We're not too worried about these numbers though, since the 65W charging tops up the phone from 0 to 100 in under 40 minutes, which is just incredible.

Verdict

The Realme X7 Pro, did leave us every bit impressed. From gaming performance to its super-fast charging make the phone a great daily driver. For those who like taking casual photos, the camera stack will offer pretty good and consistent performance as well.

—Swapnil Mathur

SPECIFICATIONS

PROCESSOR: Dimensity 1000+ 5G Processor 7nm | GPU: ARM G77 MC9 | DISPLAY: 6.55-inch Super AMOLED, 120Hz Refresh Rate | DISPLAY RESOLUTION: 2400x1080 FHD+ | OS: Android 10, Realme UI | STORAGE: 128GB 6GB RAM, 128GB 8GB RAM, 256GB 8GB RAM | REAR CAMERAS: 64MP + 8MP + 2MP + 2MP | SELFIE CAMERA: 32MP | BATTERY CAPACITY: 4,500mAh | FAST CHARGING: 65W | WEIGHT: 184g
