

The Next Big App

Clubhouse is a year old app, huge hype and super-famous users, it is valued at over \$1bn. <http://dgit.in/mar21-67>

ASUS ROG Phone 3

The successor to the widely appreciated ROG Phone 3 launches on March 10. <http://dgit.in/mar21-68>

Samsung Galaxy F62

Big on performance and battery

The Samsung Galaxy F62 is the second smartphone from the company in the F-series and is squarely a mid-ranger. Let's see how it fares in our review.

Build and design

The Samsung Galaxy F62's back is "glasstic" but scratches easily. The right side of the frame houses the volume rocker and most importantly, the fingerprint scanner that doubles up as the power button. This is a feature that's worked very well for us in our usage. The SIM tray is housed on the left frame and while you do get two SIM slots and a microSD card slot.

Display

The Samsung Galaxy F62 rocks a 6.7-inch sAMOLED display with a resolution of 2400x1080. The display by itself has a peak brightness of 560nits as measured by us, which is pretty impressive. Outdoor usage is pretty reliable as the super bright display manages to curb the reflections to a great degree, making the contents on the screen clearly legible. However, the phone does not support HDR playback, which is a bummer.

Performance

The review unit we've received is powered by the Exynos 9825 SoC that utilizes the 4-2-2 core design instead of the usual 6-2. AnTuTu scores for the Samsung Galaxy F62 come out to 392374 while the Nord's score sits at 319717. We see the F62 outperform the Nord in Geekbench5's single core test, but get left behind in the multi-core test by a tiny margin.

On our GPU synthetic tests, the F62 once again pulls ahead, but the real-world usage pegs a slightly different story. When profiling CoD Mobile and Asphalt 9 using Gamebench, we clock a median framerate of 58fps running at 89 percent stability while

Asphalt 9 did run at 30fps, but at 91 percent stability. The numbers might be slightly lower, there were no visible stutter or frame drops while gaming and we are pretty pleased with this.

On a day-to-day experience, the Samsung Galaxy F62 leaves little room for complaints. There were a few moments of stutter while switching apps, but it's a minor and very infrequent occurrence.

Battery

The second USP of the Samsung Galaxy F62 happens to be its mammoth 7000mAh battery. Watch an hour of Netflix on this phone and you lose only 8 percent battery. Navigating for an hour on Google Maps with the display on drains only 7 percent battery. In my use, the phone lasted nearly two days consistently, which is pretty great. While the phone does last a really long time, where it sort of falters is charging time. The gargantuan 7000mAh battery supports a maximum of 25W fast charging, which means, this phone takes nearly three hours to charge fully. Thankfully, you

do get a 25W fast charger in the box, so that's a good thing.

Camera

While there are four cameras on the back of the Samsung Galaxy F62, only three of them are actually usable. The primary 64-megapixel camera definitely delivers good results when you shoot in the binned mode. The colours are typical Samsung; in that, they are nice and saturated, the dynamic range is good and best of all, the photos are adequately sharp.

The 12-megapixel ultrawide camera is average at best, producing photos with decent dynamic range, but notable distortion. Lastly, we have the 5-megapixel macro camera, which you're better off not using. This is because there's no AF, no focus peaking and no image stabilisation.

When we move into low light situations, the primary camera delivers decent results, but only if you shoot in night mode. Overall, the camera experience on the Samsung Galaxy F62 is satisfactory, but not exceptional.

Verdict

The Samsung Galaxy F62 is a smartphone that's designed for people who want reliable performance, but more importantly, excellent battery life. The Exynos 9825 surprisingly still holds up, despite being from two years ago. The cameras are useable for social media. If you need a smartphone with reliable performance, but segment-leading battery life, the Samsung Galaxy F62 makes sense for you.
