Facebook has banned the Myanmar military and its affiliates following the coup on 1st Feb. <http://digit.in/mar21-70>

# Akai 43-inch Full-HD Fire TV Edition

A clone of the Onida 43-inch FHD Fire TV Edition

**T**

he 20 to 25K price point is an interesting one for those looking to get an entry-level

TV. Users can expect a 43-inch FHD TV at this price point. You can also expect a Smart TV. One of the most exciting things about TVs at this price point in 2020 and 2021 is the smart TV UI. Here, we have a TV that sports the Fire TV UI, the Akai 43-inch Fire TV Edition TV. Let's see how it performs.

## Build and design

Speaking of design, the Akai 43-inch Fire TV Edition has a design we've seen countless times before in its price segment. We have two plastic feet holding the TV in place sturdily. We also have relatively slim bezels around the TV. The TV isn't slim by any means and it has all the connectivity options on one side. The remote control connects via Bluetooth with the TV so you don't have to point it at the TV directly which is a welcome convenience.

## Ports and connectivity

When it comes to connectivity, the Akai Fire TV Edition has 3 HDMI ports, 1 USB port, AV in, LAN port and a good old antenna all on the right side. The TV also supports dual-Band Wi-Fi and Bluetooth connectivity.

## Remote control

The remote control is an evolved version of the remote control found on the Fire TV Stick. In addition to the standard navigation and playback controls, you also get access to a button for live TV, volume controls, channel controls mute, settings and recent. There's also also have OTT hotkeys on the remote control for Prime Video, Netflix and Amazon Music. Overall, the remote is functional, well-built and gets the job done.

## Display panel and picture quality

The Display Panel on the Akai TV Fire

Price  
₹24,999

Edition has a 1080p resolution. The TV does not support HDR, and this works well in its favour as most budget HDR TVs don't offer a great HDR experience. It isn't clear how much the game mode on the TV affects input lag, but in our experience, the lag wasn't so bad that you can't enjoy games on this TV. Overall, for its picture performance and considering the price, the TV does a good job.

## Audio

As much as we appreciate the TV's picture performance, the audio left us wanting a lot more. Overall, the audio performance of the TV is lacking.

## Built-in services and UI

The TV is running on the Fire TV OS, and it is identical to the one on the Fire TV Stick. While the UI is smooth and functional, the only problem we have with it is the Apple TV App. We couldn't log into the app no matter what we tried.

Amazon recently launched a new UI which is currently only available on the third-gen Fire TV Stick and Fire TV Stick Lite. The new UI brings profiles. If the new UI makes its way to the Akai TV, then the TV can

give Xiaomi's PatchWall some serious competition.

|                   |    |

| BUILD .....       | 60 |
| FEATURES .....    | 80 |
| PERFORMANCE ..... | 54 |
| VALUE .....       | 68 |

## Verdict

If you are in the market to pick up a 43-inch FHD TV for around ₹25,000, there are many options. You have the likes of the Mi TV 4A Horizon Edition, The OnePlus Y1, Toshiba

43L5050 and many more. If you are considering the Akai, you should know it has a decent panel performance for the price to enjoy movies, TV shows or gaming. The UI is fluid, and the voice assistant is spot on thanks to Alexa. The Fire TV UI works exactly as it does on the Fire TV Stick, which is a very good thing for the TV. What the TV lacks is good sound output. The built-in speakers' performance is lacklustre, so you will need to consider alternatives like a soundbar or speakers.
