Superhero Weaknesses

Seven Superheroes and their weaknesses

Kanishk Rathod | feedback@digit.in

Green Lantern: Yellow Colour

The impurity in Green Lantern's rings have no effect on objects with the colour yellow. The imposed limitation against the Green Lantern Corps, and their inability to do anything against objects of yellow colour has been shown in recent years to be arbitrary. The Yellow Impurity was formed when the Guardians of the Universe imprisoned the Parallax Entity – the fear elemental. The act left the Emotional Spectrum of the creature dormant and ended its reign of terror but also introduced the yellow impurity in the Green Light of Will. This meant that yellow objects or individuals wearing the colour yellow became the only weakness of the Green Lantern Power Ring.

Wonder Woman: Getting Tied Up

The female superhero, with all the strength of Superman, seems nearly unbeatable, if it weren't for her weakness of being bound by men. The Golden Age Wonder Woman could be rendered powerless

if her Bracelets of Submission were tied together by a man. In her own words, with tears in her eyes, "It is Aphrodite's Law! When an Amazon Girl permits a man to chain her bracelets of submission together she becomes as weak as the other women in a man-ruled world!". Despite her enslavement she cries not because of her failure of being tied up, but because she allowed a man to do so. This is meant to show that women can only be vulnerable to men when they choose to be.

Aquaman: Dehydration

Aquaman is an incredible superhero, even though he has been made fun of for decades. His remarkable durability, night vision, super hearing and the ability to go toe-to-toe with Superman for a couple minutes, all of it is only possible while he has access to a constant source of water. This is his only glaring weakness, dehydration. He becomes progressively weaker the longer he stays without water, however once he acquires it, he regains access to his full strength.

Water heals him, but without it he cannot survive too long. In the early days of the Aquaman comics, he couldn't leave the ocean for longer than an hour at a time.
