Pinwheel galaxy

The spectacular Pinwheel galaxy is a large galaxy, measuring 170,000 light years across, it is the site of many supernovas and faces us head on.

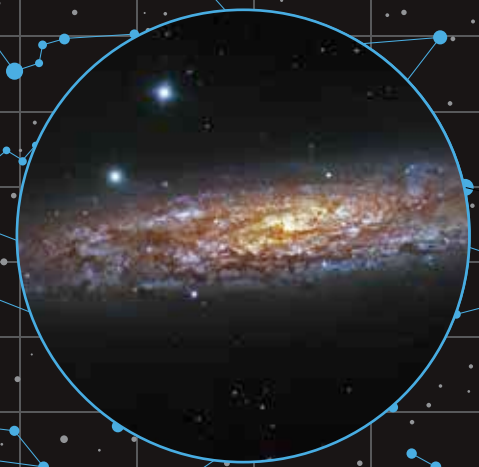

Andromeda

The closest galaxy to us will collide with the Milky Way in 4 billion years, and researchers refer to this combined new galaxy as Milkomeda.

Lindsay-Shapley Ring

Another example of a disrupted galaxy, the central nebulous structure was once a regular galaxy. The ring of stars measures 150,000 light years across.

Sculptor galaxy

This galaxy is also known as the Silver Coin or the Silver Dollar galaxy, and is a starburst galaxy undergoing a period of intense star formation.
