

DOES THIS SECTION EVEN NEED AN INTRODUCTION? FROM COMPUTERS TO MOBILES, AND HEADPHONES TO GPUs, IT'S ALL HERE...

THIS MONTH IN TECH: This month, we learn more about Elon Musk-backed Starlink, Agent001 speakers about classic switcheroos, and in Level Up, we learn some tips and tricks for ABD commands.

California to ban 'dark patterns'

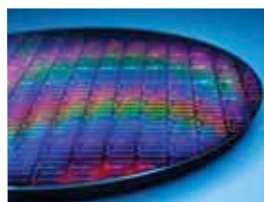

'Dark patterns' or website designs that are purposefully built to confuse or trick users into selling their information is the subject of a new legislation introduced in the state of California which is also home to the Silicon Valley and a host of technology companies. The legislation came into effect on March 15.

WHAT'S NEW

Intel outlines new IDM 2.0 strategy

Intel's CEO Pat Gelsinger announced 'IDM 2.0' strategy to chart Intel's path towards regaining innovation leadership. The first announcement was the expansion of their manufacturing facilities with two new fabs coming up in Arizona fostered by a USD 20 billion investment. Intel also stated that they were opening up their foundry to external customers. This new venture will come under a new business unit called Intel Foundry Services and will offer x86, ARM and RISC-V IPs to global customers. The company also announced a tie-up with IBM for research collaboration focused on creating next-generation logic and packaging technologies. Aside from opening up

their own foundry, the company also stated that they expect to increase their engagement with third-party foundries for a range

of IPs including communication and graphics. Lastly, the company shared progress on their 7nm process node which is expected to have its first product taped later this year. It will be for their first 7nm client CPU called Meteor Lake. "We are setting a course for a new era of innovation and product leadership at Intel," said Gelsinger. <http://dgit.in/IntelIDM2>

Mozilla leads push for FCC to reinstate net neutrality

Mozilla is championing for the reinstatement of net neutrality with the FCC. The previous administration under Ajit Pai had completely done away with Obama-era net neutrality provisions citing deregulation as an incentive for innovation. While deregulation does help foster innovation, it also helps established players in a space maintain a lead and prevent new players from encroaching upon their busi-

nesses. Mozilla, in a letter to FCC Acting Chair Jessica Rosenworcel, along with Dropbox, ADT, Eventbrite, Reddit, Vimeo and Wikimedia urged the FCC to reinstate the net neutrality provisions and called net neutrality, "critical for preserving

the internet as a free and open medium that promotes innovation and spurs economic growth." The letter also stated, "And in an environment where users frequently lack meaningful choices between ISPs, net neutrality can ultimately encourage greater long-term investment across the network stack by promoting broadband buildout, faster service, and new applications." <http://dgit.in/NNBack>

The Anti-vaxx Disinformation Dozen

Most anti-vaxx information originates from just 12 people. A recent report indicated a lot of misinformation around vaccines shared on Twitter and FB in February were attributed to these few accounts. 73 per cent of the disinformation shared was from these accounts.
