

SECURITY WATCH

Hackers hit 32 Indian firms via Microsoft email servers

At least 32 Indian organisations have been hit by hackers who exploited vulnerabilities in the unpatched Microsoft business email servers. The report that highlighted this also stated that finance and banking institutions were hit the most in the country, accounting for 28 per cent of the attacks. This is followed by government/military organisations with 16 per cent of the attacks, and manufacturing at 12 per cent. According to Check Point Research, the country with the most attacks was the US, followed by The Netherlands, Turkey, and India. Aside from these attacks, the tech giant also detected a new family of ransomware named 'DearCry' that is being used after the initial compromise of unpatched services. The vulnerabilities allow attackers to read emails without authentication and may even allow them to completely take over the mail server itself.

MOBILE WATCH

iQOO 7

The iQOO 7 could be one of the most affordable Qualcomm Snapdragon 888-powered smartphones in India. The Twitter handle of iQOO India posted a tweet asking users "What's better than Bang For The Buck?" and followed it up by saying "More Bang, Less Bucks!" A picture accompanying the tweet confirms that the upcoming iQOO phone is powered by the Snapdragon 888 chipset and will be priced under ₹40,000. The company also teased the pricing, hinting at a starting price of ₹3X,990. The phone features a 6.62-inch Full HD+ display with an AMOLED panel and 120Hz refresh rate support. Powered by the Snapdragon 888 SoC and the Adreno 660 GPU, the phone comes with up to 12GB RAM and up to 256GB storage. It has a triple rear camera setup with a 48MP primary lens. The phone is compatible with Wi-Fi 6, supports Bluetooth 5.2 and is equipped with a 4,000mAh battery that supports 120W fast charging.

APP WATCH

Jumbo: Privacy + Security

Jumbo is a new privacy-assistant app for iOS and Android devices that attempts to remove the guesswork out of privacy settings. It could prove useful to users by allowing them to reduce the amount of data they have given social media apps access to. The app manages your privacy on prominent social media services such as Facebook, Twitter, Instagram, Google Search, Messenger, You-

Tube, LinkedIn, and Amazon Alexa. The app scans your online social media accounts and makes security and privacy-based recommendations on how

to make your accounts safer. The app can scan the web for data breaches and block in-app and online trackers.

On Facebook, users can set Jumbo up to delete searches, block advertisers,

archive certain posts, set up two-factor authentication, and block ad tracking. On Twitter, the app can delete your old tweets and move them into an archive, should you ever need them. Jumbo basically has its own cloud storage for paid users where it backs up deleted posts from various social media sites. If you're slightly sceptical about giving Jumbo your login credentials, Pierre Valade, the CEO of Jumbo explained that all the processing takes place on your phone, so the data, including passwords, always stay on the phone and allegedly never communicates with the server. In addition to social media cleaning and checking, it can also reduce the number of spam robo-calls to your device.

Niagara Launcher

A minimalist Android launcher that makes most things on the screen accessible one-handed.

The launcher is completely ad-free and allows users to customise their home screens and get a streamlined look.

Photo Snatch

An app that allows users to save videos from Instagram, TikTok or a webpage easily. It comes with an in-built gallery for viewing images as well as a video player with several features such as looping, slow motion, and more.

Last Time

A simple and nifty app that keeps a record of when the user did something the last time. You can add records such as the last time you had a haircut, worked out, had a cheat meal, watered your plants, etc.
