

Google's new streaming device

Google is apparently working on a new "wireless streaming device" per a recent FCC listing. <http://dgit.in/apr21-21>

OnePlus Nord SE cancelled?

OnePlus has reportedly cancelled the OnePlus Nord SE which was an upgrade to the original Nord. <http://dgit.in/apr21-22>

OnePlus 9 Pro

A powerhouse of features

The OnePlus 9 Pro has been a highly anticipated phone for a number of reasons.

Perhaps the top-most anticipatory aspect of the phone is the Hasselblad-OnePlus collaboration. We've spent a generous amount of time with the OnePlus 9 Pro and here's how it fared.

BUILD AND DESIGN

When it comes to the design, there's nothing too special going on here. Our Morning Mist variant has a glossy finish, with a dual-tone treatment on the back. It also holds onto fingerprints with rapid fervor. In terms of ergonomics, the phone does feel nice to hold, and grips rather easily. The phone continues to sport an IP68 rating which should please those with an adventurous streak.

PERFORMANCE

We see the OnePlus 9 climb right to the top of AnTuTu charts. Surprisingly though, the Qualcomm Snapdragon 888 paired with 12GB of LPDDR5 memory is not able to beat the iPhone 12 Pro Max, with its A14 Bionic processor and 6GB RAM. In fact, we see this behaviour span the entire range of synthetic benchmarks.

In real world usage, the first thing we looked to test was gaming performance. Using Gamebench, we fire up CoD Mobile to see how the OnePlus 9 handles it. At its most demanding graphic settings, we get to play CoD Mobile at 60fps median frame rate and 99 percent stability. This is incredible gaming performance, and once we've come to expect from flagships. For those of you who are non-gamers and looking for a smartphone that won't give up on you for the next four years, the OnePlus 9 Pro is a no brainer.

CAMERA

It is no secret that in the otherwise perfect smartphone that is a OnePlus

device, the camera has always been the weak link. The OnePlus 9 Pro is leaning on the Hasselblad brand name to bolster confidence in its camera offering. The primary Sony IMX 789 48MP camera on the OnePlus 9 Pro produced images with mixed results. During the day time while shooting backlit subjects, we noticed the shadow areas being crushed due to increased contrast. Other than that, the daytime photos look incredible. They're sharp, and the colours are definitely wonderful. The ultra-wide camera is really where OnePlus makes a name for itself. The images are incredible during daylight and even low light due to the beefy 50MP Sony IMX 766 sensor. The third camera on here is a telephoto camera that is best used outdoors, in strong light where the f/2.4 aperture can pull in enough light.

DISPLAY

As if the camera wasn't enough of an attraction for the OnePlus 9 Pro, the display, takes the cake. You're getting a 1440p Super AMOLED display with LTPO layer for improved power efficiency. You also get 120Hz refresh rate and a touch polling rate that will please

even the most ardent of gamers. But these aren't the only things that make the display special; it's also the panel's excellent calibration.

BATTERY LIFE

The OnePlus 9 Pro packs a 4500mAh battery, and one common question around the lab has been, "isn't that too less for a phone with this kind of hardware?" Well, yes and no. If you max out the power-hungry features, then you're barely going to make it to the end of the day. However, you can tweak your settings the way you like, such as, lowering the display resolution to FHD+ to get improved numbers, but frankly, all this won't matter. The OnePlus 9 Pro now supports 65W Warp Charging, meaning that in under 40 minutes, your phone can go from 0 to 100. You

can alternatively opt to plunk it on the new OnePlus wireless charger which supports 50W fast charging.

VERDICT

The OnePlus 9 Pro continues to build upon the image that the brand has set; that it will always rock the most power-packed spec sheet. However, the Hasselblad collaboration doesn't seem to really do much for the OnePlus 9 Pro's cameras. Where the phone outstrips the competition is the display. The battery life will vary depending on your usage and settings, but the 65W super-fast charging has you covered. The OnePlus 9 Pro is definitely a solid option to buy.
