Vibrant, a medical tech company, has developed a disposable vibrating pill to treat chronic constipation. <http://dgit.in/apr21-36>

Xiaomi Redmi Note 10 Pro Max

The new value for money king?

Xiaomi launched the Redmi Note 10 line-up recently as the successor to the popular Note 9 series. In the series, the Note 10 Pro Max is the most premium of the lot, as it comes with powerful specs such as a 108MP primary lens and a fast 120Hz Super AMOLED display. Let's find out how the phone fares in our review.

DESIGN AND DISPLAY

The Xiaomi Note 10 Pro Max is significantly slimmer and sleeker than the Note 9 Pro Max. Additionally, the phone is also slightly lighter at 192g, despite having glass on the front and back. However, the use of glass makes the phone look premium beyond its price point. The Note 10 Pro Max uses a metallic frame to hold the glass on the front and the back of the device.

At the front of the device is the display which is one of the biggest talking points of the phone. This display is claimed to reach up to 1200nits of brightness, but when we tested the panel using our set of display tests, we got a display peak brightness of close to 600nits for HDR content.

The phone's display is a 6.67-inch display with FullHD+ resolution. The panel is rated to achieve 120Hz refresh rate, but it does not do so intelligently and as such can either be set to work at 60Hz or 120Hz. Protecting the display is a sheet of Corning Gorilla Glass 5.

PERFORMANCE

Underneath the hood, the Redmi Note 10 Pro Max is powered by the Qualcomm Snapdragon 732G processor. Xiaomi has paired this with up to 8GB LPDDR4X RAM and up to 128GB UFS 2.2 storage to choose from. The unit sent to us for review offered 6GB of RAM and 128GB of storage. As always, we tested the device using a number of synthetic benchmarks. And honestly, the results we found

Pro Max also did not encounter massive battery drain while playing games.

CAMERAS

The Note 10 Pro Max gets a 108MP-lens-based camera set-up. The hero of the show is definitely the primary lens, which we found good for clicking pictures. The performance of the camera is generally good. In well-lit situations, the primary lens captures a good amount of detail. Colour reproduction is good, but in low light scenarios, the phone has the tendency to oversaturate colours a little. The ultra-wide lens works fine. There's no noticeable fish-eye effect. However, the quality of the images is lower than that of the primary lens. The 5MP Super Macro lens also proves to be a nice addition for those who like Macro photography. However, the lens only does well in daylight situations.

weren't the best. This is because the phone scored lower than the Dimensity 800U-powered Narzo 30 Pro and the Exynos 9825-powered Samsung F62. However, the Adreno 618 GPU did offer better benchmark results. During our Gamebench test, we achieved a median FPS of 58 frames for Call of Duty Mobile at stability of 98 percent.

Outside of the realm of synthetic benchmarks and tests, we can confirm the general performance of the device appears to be satisfactory and the device is good at handling heavy-duty games including Call of Duty: Mobile and Asphalt 9 Legends.

BATTERY

The Note 10 Pro Max offers a similar-sized battery as last year, with the new device getting a 5,020mAh battery with support for 33W fast charging out-of-the-box. In our video loop test, the phone gave us over 16 hours of use at full brightness. The Redmi Note 10

VERDICT

The Redmi Note 10 Pro Max is one of the best value for money offerings you buy right now. Starting at ₹18,999, it offers a premium design,

powerful cameras, vibrant display and decent hardware under the hood to handle games and resource-intensive applications.
