Micromax In 1

A satisfactory 'Made in India' budget contender

Micromax has clawed its way back into the smartphone market and the company launched the new Micromax In 1 that is priced pretty competitively. Let's see how the Micromax In 1 fares in the gruelling budget segment.

BUILD AND DESIGN

The Micromax In 1 features an 'X-shaped' pattern on the back panel that has an iridescent effect. The back has a matte finish and the company claims that it comes with an oleophobic coating that prevents fingerprints and smudges. The Micromax In 1 isn't the slimmest and lightest budget phone out there, but, surprisingly, it doesn't feel too bulky when held in hand. The side-mounted fingerprint, on the other hand, can feel sluggish at times.

DISPLAY

The Micromax In 1 has a decent 6.67-inch IPS LCD display with Full HD+ resolution. These specs are similar to the Poco M3 and Redmi 9 Power that are some of its toughest competitors. The Full HD+ display on the Micromax In 1 impressed us a fair bit due to its brightness and vivid representation of colours. The vivid colours, while not accurate, do make content look great on the phone. Micromax has also provided Widevine L1 support so you can watch content on OTT platforms in HD.

PERFORMANCE

The Micromax In 1 is powered by MediaTek's Helio G80 chipset. This is paired with up to 6GB RAM and up to

128GB internal storage. The Micromax In 1 performs pretty well in benchmarks when compared to similarly-priced competitors.

In real-world performance, the Micromax In 1 comes with stock Android with no ads or bloatware, which is one of its biggest selling points.

Price
₹11,999

The software is clean and clutter-free which is vastly different from other budget phones that come with their own skin and preloaded apps. The phone, as per Micromax, is well suited to gaming. Our tests verify this claim as long as you keep the graphics on the default setting (low).

PERFORMANCE	72
VALUE	69

CAMERA

The Micromax In 1 houses a triple rear camera stack featuring a 48MP primary lens, a 2MP macro sensor and a 2MP depth sensor. There's no

ultrawide camera, which is slightly disappointing. Housed in a punch-hole cutout is an 8MP selfie shooter. The 48MP primary lens produces pretty satisfactory shots in bright daylight with decent colour and contrast.

However, the dynamic range and detail aren't the best. Close up shots with the main camera, however, are pretty good with ample detail and vivid colours that pop. Portrait mode isn't very convincing on the Micromax In 1 since the background blur looks slightly unnatural in some shots and the edge detection is less than ideal. The 2MP macro lens is mediocre. Since there's no autofocus, the sensor struggles to focus on objects and there's generally

a lack of detail in the macro shots. The 8-megapixel selfie shooter takes decent shots in daylight but falters in low light where the shots are extremely soft and suffer from a lot of noise. Moving on to low light photography, the main camera returns noisy and soft shots in such situations, however, Night Mode does make things slightly better.

BATTERY LIFE

The Micromax In 1 is no slouch when it comes to battery life. The phone houses a 5,000mAh cell that keeps the phone powered for over a full day of usage. There are phones in this price range that come with larger 6,000mAh batteries, but the Micromax In 1 does pretty well for its capacity. In a day with extensive setup processes, running benchmarks, playing games, browsing through social media, and the works, the phone managed to end that day with 25 percent battery remaining, which is pretty impressive.

VERDICT

The Micromax In 1 is a decent affordable phone that faces stiff competition from the likes of the Realme Narzo 30A, Poco M3, and a few others. The device offers some impressive features and specs such as a Full HD+ display with Widevine L1 certification, a 5,000mAh battery, and a powerful MediaTek Helio G80 processor. However, it does falter in some areas such as low light photography, lack of stereo speakers, and slow charging speeds. If you're looking for a phone that's Made in India that comes with good battery life and performance, the Micromax In 1 is a good option under 12K.

—Dhriti Datta

SPECIFICATIONS

CHIPSET: MediaTek Helio G80 | CPU FREQUENCY: Octa-core CPU : 2x A-75 2.0 GHz + 6x A-55 1.8 GHz CPU (12nm) | GPU: Mali G52 MC2 950MHz | RAM: 6GB | ROM: 128GB eMMC 5.1 | DISPLAY SIZE: 16.9cm (6.67) | RESOLUTION: FHD+ (1080 x 2400) | REAR CAMERA: 48MP + 2MP Depth + 2MP Macro | FRONT CAMERA: 8MP | BATTERY CAPACITY: 5000mAh | USB TYPE: Type C | CHARGER: 18W fast charger | WEIGHT: 195g | OS: Android 10
