

Exchange server defensive tool

Microsoft provides a one-click solution to small and medium sized business owners to prevent zero-day attacks. <http://dgit.in/apr21-69>

Clubhouse rival

LinkedIn is now testing a social audio experience to combat Facebook and Twitter's upcoming Clubhouse. <http://dgit.in/apr21-70>

"**xy** - yank into register x
 "**xp** - paste contents of register x
 "**+y** - yank into the system clipboard register
 "**+p** - paste from the system clipboard register

Note - Registers are being stored in ~/.viminfo, and will be loaded again on next restart of vim.

Important Special registers:

0 - last yank
 " - unnamed register, last delete or yank
 % - current file name
 # - alternate file name
 * - clipboard contents (X11 primary)
 + - clipboard contents (X11 clipboard)
 / - last search pattern
 : - last command-line
 . - last inserted text
 - - last small (less than a line) delete
 = - expression register
 _ - black hole register

MARKS AND POSITIONS

Instead of manually moving about the entire document you can simply lay down some markers to quickly jump to. Think of these like anchor links that you see in web browsers.

:marks - list of marks
ma - set current position for mark A
`a - jump to position of mark A
ya - yank text to position of mark A
`O - go to the position where Vim was previously exited
`` - go to the position when last editing this file
`. - go to the position of the last change in this file
`` - go to the position before the last jump
:ju[mps] - list of jumps
Ctrl + i - go to newer position in jump list
Ctrl + o - go to older position in jump list
:changes - list of changes
g, - go to newer position in change list
g; - go to older position in change list
Ctrl +] - jump to the tag under cursor

Note To jump to a mark you can either use a backtick (`) or an apostrophe ('). Using an apostrophe jumps to the beginning (first non-black) of the line holding the mark.

MACROS

Macros are a great way to repeat a sequence of actions over and over again. This is very handy in tackling tedious edits.

qa - record macro a
q - stop recording macro
@a - run macro a
@@ - rerun last run macro

CUT AND PASTE

Taking Ctrl+C, Ctrl+X and Ctrl+V to a whole different level.

yy - yank (copy) a line
2yy - yank (copy) 2 lines
yw - yank (copy) the characters of the word from the cursor position to the start of the next word
y\$ - yank (copy) to end of line
p - put (paste) the clipboard after cursor
P - put (paste) before cursor
dd - delete (cut) a line
2dd - delete (cut) 2 lines
dw - delete (cut) the characters of the word from the cursor position to the start of the next word
D - delete (cut) to the end of the line
d\$ - delete (cut) to the end of the line
x - delete (cut) character

INDENT TEXT

Improve the readability of your text by formatting your text with indents.

>> - indent (move right) line one shiftwidth
<< - de-indent (move left) line one shiftwidth
>% - indent a block with {} or {} (cursor on brace)
>ib - indent inner block with {}
>at - indent a block with <> tags
3== - re-indent 3 lines
=% - re-indent a block with {} or {} (cursor on brace)
=ib - re-indent inner block with {}
gg=G - re-indent entire buffer
]p - paste and adjust indent to current line

EXITING

Don't forget to use the right commands to save all the work you've done on a document.

:w - write (save) the file, but don't exit
:w !sudo tee % - write out the current file using sudo
:wq or :x or ZZ - write (save) and quit
:q - quit (fails if there are unsaved changes)
:q! or ZQ - quit and throw away unsaved changes
:wqa - write (save) and quit on all tabs

SEARCH AND REPLACE

If you know regular expressions, then the search and replace functionality becomes even more powerful as you can leverage the pattern searching functionality with regex.

/pattern - search for pattern
?pattern - search backward for pattern
\vpattern - 'very magic' pattern: non-alphanumeric characters are interpreted as special regex symbols (no escaping needed)
n - repeat search in same direction
N - repeat search in opposite direction
:s/old/new/g - replace all old with new throughout file
