

Nestled UK

Nestled, the UK-based modern real estate agent raises £5m to improve it's selling experience. <http://dgit.in/apr21-71>

NFT Art Marketplace

SuperRare, the NFT art marketplace, closes \$9m in Series A funding. <http://dgit.in/apr21-72>

:%s/old/new/gc - replace all old with new throughout file with confirmations
:nohlsearch - remove highlighting of search matches

SEARCH IN MULTIPLE FILES

Searching through multiple files works in the same way as grep does in your bash terminal.

:vim[grep] /pattern/ {file} - search for pattern in multiple files
e.g. **:vim[grep] /foo/ **/***
:cn[ext] - jump to the next match
:cp[revious] - jump to the previous match
:cope[n] - open a window containing the list of matches
:ccl[ose] - close the quickfix window

TABS

Multitasking is built into Vim with the aid of panes or tabs. You can not only have multiple files open at the same time in multiple tabs but you can even edit them at the same time. Here's how you can navigate between the tabs.

:tabnew or **:tabnew {page.words.file}** - open a file in a new tab
Ctrl + wT - move the current split window into its own tab
gt or **:tabn[ext]** - move to the next tab
gT or **:tabp[revious]** - move to the previous tab
#gt - move to tab number #
:tabm[ove] # - move current tab to the #th position (indexed from 0)
:tabc[lose] - close the current tab and all its windows
:tabo[nly] - close all tabs except for the current one
:tabdo command - run the command on all tabs (e.g. **:tabdo q** - closes all opened tabs)

WORKING WITH MULTIPLE FILES

If just opening multiple files at the same time and editing them isn't enough, Vim even allows you to play around with the arrangement of the files on screen while editing them.

:e[dit] file - edit a file in a new buffer
:bn[ext] - go to the next buffer
:bp[revious] - go to the previous buffer
:bd[elete] - delete a buffer (close a file)
:b[uffer]# - go to a buffer by index #
:b[uffer] file - go to a buffer by file
:ls or **:buffers** - list all open buffers
:sp[lit] file - open a file in a new buffer and split window
:vs[plit] file - open a file in a new buffer and vertically split window
:vert[ical] ba[ll] - edit all buffers as vertical windows
:tab ba[ll] - edit all buffers as tabs
Ctrl + ws - split window
Ctrl + wv - split window vertically
Ctrl + ww - switch windows
Ctrl + wq - quit a window

Ctrl + wx - exchange current window with next one
Ctrl + w= - make all windows equal height & width
Ctrl + wh - move cursor to the left window (vertical split)
Ctrl + wl - move cursor to the right window (vertical split)
Ctrl + wj - move cursor to the window below (horizontal split)
Ctrl + wk - move cursor to the window above (horizontal split)

DIFF

When working with multiple files, the diff command set can be quite helpful in identifying the differences between two versions of the same files or two different files altogether.

zf - manually define a fold up to motion
zd - delete fold under the cursor
za - toggle fold under the cursor
zo - open fold under the cursor
zc - close fold under the cursor
zr - reduce (open) all folds by one level
zm - fold more (close) all folds by one level
zi - toggle folding functionality
]c - jump to start of next change
[c - jump to start of previous change
do or **:diffg[et]** - obtain (get) difference (from other buffer)
dp or **:diffpu[t]** - put difference (to other buffer)
:diffthis - make current window part of diff
:dif[fupdate] - update differences
:diffo[ff] - switch off diff mode for current window

Learning all of these commands isn't going to be a simple task. Sure, with this cheatsheet, you'll do it quicker but the best way to go about this is to practise as much as you can. Print these commands out and paste them up on a wall and use these for quick reference and you'll be on your way to mastering Vim in no time. 🚀
