

through research conducted by other adults, mixed in with opinion pieces written by adults, all in an effort to try and figure out what babies born in 2021 will be doing on the internet in 7 to 15 years! Now we could just type out some nonsense and believe that none of you folk will remember reading this in 10 years time, but we won't. For starters our 20th Anniversary is just around the corner, and people are definitely going to remember this. Secondly, most of our readers are between the ages of 18 and 35 anyway, and either have young kids already or will have some soon enough, or at the very least, have some babies in the family who they're immediately associating this story with. As and

when our 30th anniversary rolls around, there are going to be some of you very eager to rub our faces in everything we got wrong. All we can hope is that our digging through hundreds of sources has helped us form an opinion that's at least partly based in reality as the future rolls around. And now that we're done making excuses and issuing caveats that we hope will help us save face in the future, let's get started down this rabbit hole...

Note: When you see underlined text that looks like a link, look for a box called Suggested reading / watching as we have placed the links there for the print issue. In the Digital Mag just click/tap on the link to open it. 

PRIVA-C?

Will Gen C (generation born during the COVID pandemic) even care about this outdated concept?

Boo Man | boo@digit.in

Some of the biggest proponents of online privacy are those whose business models don't depend on it, while those who support a more "open" interpretation to privacy online are those whose bottom lines depend on advertising and data sharing. Let's get one thing straight, neither Apple nor Google care about your welfare. We only use Apple and Google as examples, because they happen to be the biggest names on opposing sides of this, and both have mainly their own business success in mind (as they should). What they shouldn't be doing is trying to emotionally blackmail you into choosing their products over others. The same goes for Facebook or anyone else in the business of trying to make money off you. At the smaller end of this scale, this includes us as well, because even Digit makes money off our readers, and denying that we have that as a business goal is just wrong. The

quality of the content in this magazine is why you will decide to buy this issue next month. If we start writing pathetic stories, you will stop reading. If we decided to double the cost of this magazine, many of you would stop reading. So yes, while emotions are involved with smaller brands like us, even those cannot be taken for granted.

These days, there are very few variations between online business

models. If someone is providing a service, they can either charge you for it, or they can offer it to you for free, but keep it "ad supported". Instead of using the big brands as examples, let's use us. We have two teams who work on different platforms. The magazine team looks to bring out indepth features and good reads that people will appreciate and pay for. The web team has to write with SEO in mind, and tries to reach you when you are about to make a buying decision. This is why the magazine will deal more with concepts and feature articles, while our site is more targeted at product reviews and buying advice. For the magazine, while advertising helps us keep costs under control, the primary source of income is you, the reader, and the subscription fees you pay. Since most Indians are still not used to paying for content online (unless it's entertainment content from
