the artists and the buyers of the NFT tokens. The good thing about this is that you can prove originality."

The ingenuity of WazirX lies in the flexible P2P model, that allows users to trade cryptocurrencies between themselves. Throughout the stringent regulation regime on cryptocurrency, WazirX provided buyers in India an easy way to invest in cryptocurrencies. As a P2P mediator, WazirX managed to provide one of the easiest options for Indians to buy and sell cryptocurrencies, even though the restrictive regulations were in place. Still, WazirX is one of the companies leading the charge when it comes to asking for the government to implement regulations.

been great for digital artists – it's offered a ready marketplace for digital art – something that didn't exist before NFTs, because everyone was worried about duplication and authenticity of digital art. Now with storing tokens on the tamperproof, transparent, blockchains, it's made digital art associated with the NFT a collectible, and the art market is responding to this. As India's first AI artist, I'm excited by this new space and have been actively involved with making and selling NFTs, primarily through the premium, one of the only curation only NFT platforms- Superrare. Being the first and only Indian artist on Superrare, I'm excited to bring my

Commenting on the launch of the NFT marketplace by WazirX, Agrawal tells us that he is "very excited to see an Indian NFT platform! I'd love WazirX to get actively involved with the Indian art community that is already active in the NFT space. It's a small bunch of artists currently, but we're constantly looking to expand and bring more artists in. I'd love to see WazirX truly bring in more Indian art to the NFT scene, and encourage Indian collectors to get involved too." Siraj tells us, "I am eager to see the response of WazirX's NFT platform from the Indian audience. I also hope this new platform brings out many other local physical artists to the digital medium."

Zebpay, another leading crypto exchange in India had launched its own NFTs, the Zebra token back in December 2020. The company is now planning to launch an NFT marketplace, which is not just meant for artwork, but digital collectibles of many varieties. The soon to be launched marketplace is called Dazzle. Vikram Rangala, COO of ZebPay told us, "ZebPay will soon launch Dazzle, India's first full-service NFT marketplace. Anyone can use this platform to create, buy, and sell NFTs. It is not limited to artists. Digital collectables and intellectual property of all sorts can be turned into an NFT on Dazzle. We announced India's first NFT, the ZEBRA token, back in December 2020, with a limited release unfolding in 2021. At first, ZEBRA tokens will give owners rewards on ZebPay, then later unlock other special features, just like players unlock powers in video games." Committing on the launch of the NFT marketplace by WazirX, Rangala said, "we are happy to see WazirX joining the NFT party. As we have said before, we see other exchanges and marketplaces as collaborators. The Dazzle marketplace, which we announced in December 2020 and which has been in development for some time, will be a larger NFT marketplace with more than just digital art." 

Harshit Agrawal's AI NFT art on SuperRare

"We are building up the community also, pushing for positive crypto regulations so that it is easier for the users and customers to choose the right platform, and also making sure that the Indian crypto ecosystem does not have bad actors. We have been doing a lot of work around educating everyone in pushing for positive regulations," says Shetty.

The launch of local marketplaces is great news for local NFT artists, who use international platforms such as SuperRare or OpenSea. Harshit Agrawal, who sells AI artwork as NFTs, tells us how NFTs benefit the artist, "NFTs have

unique art- AI art inspired by traditional Indian art like mask cultures and rituals of India, bright Thangka (Buddhist) paintings. These have been much appreciated by collectors at Superrare where I've sold all my works of this style on the platform."

Siraj, who makes illustrated NFT art, tells us, "NFTs opens up a new platform for digital artists to show their work to the global audience. When a user buys NFTs, the users can make sure that they are buying the artwork from the original artists with a seal of authenticity. Also, the artists gets royalty for the artworks when they get sold in the secondary market."
