

Windows-powered Switch rival

The Windows-based GPD Win 3 handheld console is a rival to the Nintendo Switch priced at \$1,129.99. <http://dgit.in/may21-11>

Robotic dog gets fired

NYC's PD laid off Digidog, a robotic dog since it sends a "wrong message" to the residents. <http://dgit.in/may21-12>

Teardown: Xiaomi Mi Watch 2021

Xiaomi's latest redesign of the Mi Watch

Manish Rajesh | manish@digit.in

Easy to pry open

The Mi Watch is water resistant up to 50 meters, and the back is fairly easy to pry open with a Torx T2 bit which reveals the battery and the rest of the watch's insides. On the inside, you've got standard Phillips screws so you shouldn't have too much trouble opening the watch up further.

Modular battery

The battery uses a simple modular connector, and can be freed easily with some prying; this bodes well for future repairs. The battery is a 1.62 Wh (420 mAh at 3.85 V) Li-ion block which charges wirelessly. The bottom part of the watch case also holds a tiny vibration motor, the heart rate and SpO2 sensor board, a barometric sensor and a MEMS microphone. Behind the sensor board you've got a Texas Instruments AFE44I30 Biosensor Analog Front End module.

Easy to remove mainboard

The main board is secured with two Phillips screws, and comes out easily. On the top side of the board, you've got a Ambiq Micro AMA3B MCU and a Bosch Sensortec BMI270 3-axis accelerometer/gyroscope.
