Asus ROG Phone 5

Gaming to the max

The ROG Phone 5 doesn't get a special chipset like last year, but instead, is infused with a boatload of features that are designed to make your gaming experience top-notch.

BUILD AND DESIGN

Our Phantom Black coloured variant comes with distinctive electro-punk pink accents, which are a nice touch. There's a ROG logo on the back that lights up in a similar fashion to the ROG Zephyrus G14's Anime Matrix Display.

The ROG Phone 5 comes with a few flaws. Firstly, the accessory port has been shown to be the cause of structural compromise. Additionally, the phone does not come with an IP rating, and neither is there a rubber gasket around the SIM card tray. Secondly, the phone is incredibly slippery. However, the case supplied with the ROG Phone 5 prioritises looks over protection. The phone does use Gorilla Glass Victus, but at the end of the day, it's still glass.

DISPLAY

The Asus ROG Phone 5 is said to feature a display that's been custom made by Samsung for Asus. It is a massive 6.78" OLED display with an FHD+ resolution and a refresh rate of up to 144 Hz.

The Default colour profile was recorded to encompass 99 per cent of the Display-P3 colour gamut. The average DeltaE for colour reproduction in this profile is 3.98, with the maximum DeltaE error being 9.8. Disappointing.

Asus also claims a typical max brightness of 800 nits (what you can push the display to manually), but we only recorded it going as high as 680 nits. It's still a very bright display by any standard mind you, with the panel kicking into the 1200 nits range

Price
₹49,999

when you've got HDR content being displayed. Overall, the panel is great.

PERFORMANCE

Where the ROG Phone 5 does excel over its similar spec'd brethren is with respect to throttling. After 15 minutes of running the CPU throttling test, the Snapdragon 888 on the OnePlus 9 Pro throttles down to 84 per cent while the same chipset on the Asus ROG Phone 5 throttles down to just 93 per cent. This speaks volumes about the new cooling capabilities of the Asus ROG Phone 5, and that's without the new AeroActive cooler installed. This is not even with X-Mode enabled, which is a whole different beast, which we will get into.

FEATURES

This is the stuff that makes the ROG Phone 5 a gaming phone that outdoes every other smartphone in the market. The phone itself features the much loved ultrasonic triggers and 10 motion control gestures. This year's AeroActive cooler gets two trigger buttons as well. Last but not the least, you've got the Kunai GamePad 3, which essentially

converts the ROG Phone 5 into a handheld gaming console.

CAMERA

The primary camera is capable of producing impressive results no doubt. The low light photos shot in the normal mode do leave us wanting more but switch over to night mode and you get far better results. The ultra-wide camera on the ROG Phone 5 feels like it was an afterthought. While the camera may not come with AF, what it does do well is control the distortion. You can use the ultra-wide camera in the Night mode, but the results just aren't that great. The Macro camera has no autofocus, no stabilisation and no focus peaking, getting the perfect shot is frustratingly difficult.

BATTERY

If you've got the CPU-GPU fully unlocked, and the display set to 144 Hz, you can expect a day of use as long as your gaming sessions are limited to 30-45 minutes.

If you game for a few hours, on the other hand, you can easily expect that the phone will need a top-up before the day's end.

VERDICT

If you're looking for a smartphone that takes your gaming performance to the next level, there's no competition to the ROG Phone 5. Do keep in mind that it will require special care and the camera is nothing special.

—Swapnil Mathur

SPECIFICATIONS

WEIGHT: 238 g | DISPLAY TYPE: AMOLED, 144 Hz | DISPLAY SIZE: 6.78-inches | RESOLUTION: 1080 x 2448 pixels | OS: Android 11, ROG UI | CHIPSET: Qualcomm SM8350 Snapdragon 888 5G | CPU: Octa-core | GPU: Adreno 660 | STORAGE: 128 GB, 8 GB RAM | 256 GB, 12 GB RAM | 256 GB, 16 GB RAM | MAIN CAMERA: 64 MP + 13 MP + 5 MP | SELFIE CAMERA: 24 MP | FINGERPRINT SENSOR: Under display, optical | BATTERY: Li-Po 6000 mAh, non-removable with fast charging up to 65 W
