Redmi Smart TV X65

Does size matter?

Price
₹57,999

HDMI 2.1, but it can only run games at 60 Hz. The feature it offers is ALLM, and while we don't have any way of measuring the actual input lag, Xiaomi claims an impressive 5 ms input lag on the TV.

We played a bunch of games using a PS5, and the results are interesting, to say the least. A game like Returnal has a lot of fast-paced action where every millisecond counts, and from a gameplay perspective, the game was quite enjoyable. In games with dark black environments we see a grey tint to them, and this is because the panel doesn't have local dimming and is trying to simulate the colour black.

If you are on a tight budget and want a TV for gaming, you could consider this

AUDIO PERFORMANCE

The TV comes with 30 W of sound output, using two 15 W drivers. The TV has decent sound and surprisingly decent performance when watching movies with a lot of mixed audio. Ready Player One is a great example of this. While we have heard better sounding speakers on budget TVs, these get the job done. Alas, you'll get no bass here.

VERDICT

Xiaomi brings support for eARC for home theatres, ALLM for gaming and support for various HDR formats with this TV. While the overall picture quality is good for the price, HDR 10+ content still has some issues. We believe that Xiaomi has an interesting offering with the Redmi TV X65 for ₹57,999.

Xiaomi launched the Redmi Smart TV X Series back in March 2021. The TVs bring almost all the features found on the Mi QLED TV 55-inch we saw launch back in December 2020. Let's see how the IPS variant fares.

BUILD AND DESIGN.....65
 FEATURES.....74
 PERFORMANCE.....62
 VALUE.....68

The Redmi Smart TV X65 has D-LED backlighting, and Xiaomi has not disclosed the brightness of the TV in nits nor the contrast ratio. The TV does not have any dimming zones but has support for all popular HDR formats and claims to cover 85 per cent of the NTSC and 92 per cent of the DCI-P3 colour space.

PERFORMANCE

We played our usual slew of Dolby Vision and HDR 10, 10+ content on the TV and found the overall experience good. In Dolby Vision content from Netflix, we have shows like Altered Carbon, Our Planet and more, and the colour reproduction in these scenes was good.

With SDR content, when switching between the Standard and Vivid mode on the Redmi TV, people's skin tones also get accentuated along with the other colours making them appear too yellow. Considering the price of the TV, the Dolby Vision and HDR 10 content looks good on this TV, with some room for improvement with HDR 10+ content.

GAMING

This is where things get interesting. The Redmi Smart TV X65 supports

BUILD AND DESIGN

The TV has a plastic frame and two plastic feet holding it in place. Unlike the Mi QLED TV, which had a premium build, this one has a budget build, and that's ok, considering the price point.

The ports on the Redmi Smart TV X65 are closer to the edge of the panel at the back, making it easier to reach. We also have the three HDMI ports, two USB ports and the headphones port facing outwards while the other ports face down. There is also a small plastic clasp at the back of the TV to help with cable management. The remote control you get with the Redmi TV is the same one we've seen on other MI TVs and the Mi Box 4K.

DISPLAY

Kicking things off with the display, the Redmi Smart TV X65 comes with an IPS and VA panel option, but there is no way of choosing one over the other when purchasing the TV.
