Vitalik Buterin who is one of the Co-Founders of Ethereum, the popular blockchain technology company, has donated over USD 1 Billion in cryptocurrency to the India Covid Relief Fund and several others.. <http://dgit.in/VitaBil>

WHAT'S NEW

Apple introduces iOS 15, MacOS Monterey, WatchOS 8 and more

WWDC 2021 saw Apple bring out a host of new improvements to their operating systems for the iPhone, iPad, Watch and Mac devices. Like all technology companies who've overhauled their services to enable better collaboration within the ecosystem of devices, Apple also brought several updates to services such as FaceTime, iMessage, Apple Map, Siri and even their new iCloud Plus service. For budding developers, Apple has integrated a Swift IDE onto iPads so that folks can make iOS apps right from an iPad. Siri got a little more diverse with more voices being

integrated and also saw several quality of life improvements. Apple also stated that they were adding more analytics

to their Health app to show users trends and projections on the basis of their historical health data. Privacy was also a major theme across WWDC as Apple implemented more features such as IP obfuscation and dummy email IDs to further keep your private information private.

Facebook planning to launch smartwatch

It won't be long before we get to see Facebook's new smartwatch. The company has not publicly announced their plans but insiders have stated that the company is working on a smartwatch prototype which will feature a display with two integrated cameras that can be detached for taking photos and videos, aside from calling. Facebook is reportedly talking to accessory manufacturers to foster an ecosystem around

their smartwatch. The idea behind Facebook's smartwatch is to implement smartphone-

like features into the watch so that users will use it in a way similar to their smartphones. This is not the first hardware

that the social media giant has released but would certainly be a novel take on the whole concept of smartwatches. Moreover, Facebook is also in talks with wireless carriers in the US to bring LTE support to the smartwatch. One of the key considerations while choosing smartphones is a big display, so it will be interesting to see how Facebook plans to compensate for that with a small display device.

Firefox block cross-site tracking by default

Starting with Firefox 89, the browser will enable Total Cookie Protection by default in Private Browsing sessions. This feature segregates cookies which prevent them from access cookies left by other websites. <http://dgit.in/FF89privacy>

Work from home is here to stay

In light of successful vaccination drives in the US, as companies have started calling their employees to come back into offices, an increasing number of employees are choosing to quit work rather than go back to the office. <http://dgit.in/wfhpls>

NVIDIA to launch RTX 3070 Ti

NVIDIA launched the RTX 3080 Ti earlier in June and will be following it up with the RTX 3070 Ti a week after the launch of the 3080 Ti. Indian retail prices for the RTX 3080 Ti are around INR 2 lakh for partner cards. <http://dgit.in/NV3070Ti>
