Air India data breach affects 4.5 million customers

Personal information belonging to approximately 4.5 million Air India customers was leaked two months following the hack of Passenger Service System provider SITA. Air India first informed its customers that SITA had been a victim of a cyberattack on March 19. The airline confirmed that the data breach impacted passengers that had registered all the way back in August 2011, up until February 2021. After investigating the concerning security incident, it was allegedly found that no credit card information or password details were accessed during the breach. Air India stated, "The breach involved personal data with details that included name, date of birth, contact information, passport information, ticket information, Star Alliance, and Air India frequent flyer data as well as credit cards data."

MOBILE WATCH

Poco F3 GT

Poco F3 GT has finally been confirmed for launch in India. While the company has not given an exact date of launch for the device yet, they have shared information about the approximate time frame for the launch. Poco has confirmed via a tweet, that the Poco F3 GT will be launched during Q3 2021.

As per reports, the Poco F3 GT could be a rebrand of the Redmi K40 Game Enhanced edition. The device is already launched in China and offers gaming triggers, a 6.67-inch OLED display, 67W wired fast charging, and a big 64MP primary lens-based camera set-up. The Redmi K40 Game Edition packs a MediaTek Dimensity 1200 SoC paired with up to 12GB RAM and 256GB storage. Storage is further expandable via a microSD card. In terms of optics, the phone gets a triple-camera setup at the back, with a 64MP primary sensor.

APP WATCH

Stellarium Mobile Free

Stellarium Mobile Free is the free version of Stellarium Plus which is available on both Google Play Store and Apple App Store. It is a planetarium app, perfect for star enthusiasts, that identifies stars, constellations, planets, comets, satellites, and other extraterrestrial bodies in real time. All you do is point your phone's camera at a desired position in the sky and the app identifies what

you're looking at within seconds. The app has an easy-to-use interface that most people should be able to pick up on their first try, so it's a great app for even children to explore the night sky. This free version of the app allows users to

view an accurate night sky simulation of stars and planets on any given date, time and location. You can also track artificial satellites such as the Interna-

tional Space Station. The app can also simulate landscape and atmosphere and show a 3D rendering of solar system planets and their satellites.

The free version of the app has plenty to offer on its own, but if you're itching for more, you can upgrade to Stellarium Mobile Plus within the app itself. The upgraded version has information about all known stars, planets, natural satellites, comets, and asteroids. You can also view high resolution images of deep sky objects and planetary surfaces. So, if you're an avid stargazer or just a beginner, Stellarium is a great app to have owing to the sheer number of features it possesses. Note that if you have an iOS device, you can only get the paid version of this app for \$9.99.

Cultivate

Cultivate is a productivity app that allows users to build a to-do list with some gamification elements. As you cross things off your list, the app waters your activity "plant" and keeps it alive.

One Swipe Notes

One Swipe Notes uses floating windows to allow users to take their notes quickly. The notepad pops from a predetermined location on your screen when you swipe it out, then you write your note and simply tuck it away.

x100

x100 is a workout app that helps you keep track of your reps. All you do is set up the phone's camera to see you and the app will begin counting it out automatically by identifying the movement in the first few reps.
