HIBP goes open-source and as part of this move, the FBI will now contribute to the HIBP database. <http://digit.in/jun21-01>

Amazon buys MGM

Tech giant Amazon buys film and TV company MGM, studio behind James Bond, for \$8.45 Billion. <http://digit.in/jun21-02>

The end of free unlimited photo storage on Google Photos

Google Photos free storage offer ends: Here's how you can prepare for the change

Deepak Singh | feedback@digit.in

F

ree unlimited lifetime storage for Photos was arguably one of the best Google services

available. Users could choose to backup unlimited photos in “high-quality” for free or backup “original quality” photos against their allotted drive storage. But alas, all good things must come to an end.

On June 1, Google revoked the option for free “high-quality” uploading. It also changed the name “high quality” to “storage saver”, which should be a better indication of the compressed nature of these images. The reason for the abrupt change in policy is simple – free back-ups are costing Google a lot of money. According to the mountain-view giant, more than 28 billion photos are uploaded to Google photos every week, and it isn't economically viable anymore to pile these on its servers for free. The move also is meant to encourage users to sign up for Google's storage subscription called Google One.

If you are still trying to figure out whether you will continue using Google photos, or if you are unsure how to migrate, we are here to help. Here are some answers to queries related to Google Photos. We also have a few tips that'll make it easier for you to manage your data.

WILL MY EXISTING PHOTOS BE DELETED?

No. All existing ‘high quality’ photos uploaded before June 1, 2021, will remain backed up for free. It's what you upload after June 1, 2021, that counts against your 15GB free quota. Essentially, you need not hurry to download or transfer high-quality photos already backed up to your account. They remain there as-is and the space they consume won't be deducted from your 15GB free storage limit. No worries. Google has rolled in a new tool that will let users know what photos are backed up against their 15GB quota and what images shall remain backed up for free. The tool will also help users quickly access blurry photos and videos that they can delete to free up more space.

HOW TO CHECK AND MANAGE THE GOOGLE PHOTOS STORAGE I HAVE USED?

If you are wondering how much of your 15GB free storage is tied up in Google Photos, here's how you can be sure. Go to the Google One page and tap on the storage

tab on the right. Here you will see the breakup of your free 15GB google storage space and can check exactly how much is being used by Google Photos, Google Drive, and Gmail. To further manage Google Photos storage, you can directly head to the Google Photos management page. On the Google Photos quota management page, you will get an estimate of how long your free storage is going to last. You can also get direct access to what Google identifies as blurry photos, screenshots and storage hogged by third-party apps.

When you are getting close to hitting your storage cap, Google will notify you about it via the app and by email. You can also get a personalised estimate of how long your free storage may last, based on the frequency of your photo and video back ups to your Google account by heading over to this link – <http://digit.in/gphotos>.

HOW MUCH DOES GOOGLE STORAGE COST IN INDIA?

In case you plan on sticking to Google services and don't mind paying for some extra cloud storage,
