The DoT has allocated 700MHz, 3.3-3.6 GHz and 24.25-28.5 GHz bands to Vi, Jio, Airtel, BSNL and MTNL. <http://dgit.in/jun21-06>

Crypto regulations

After coming out of a restrictive regime, the industry looks forward towards moving to more positive regulations that helps the emerging DeFi ecosystem in the country thrive.

Aditya Madanapalle | aditya@digit.in

In the general backdrop of widespread digitisation and increase in volume of digital transactions triggered by the outbreak, crypto Industries in India have innovated rapidly in terms of rolling out features according to the demands of the market. For a detailed look at the regulatory journey so far, read Legal Tangle in the March 2021 issue of Digit. A bill was listed in January this year, but the text of the bill is not yet public,

leading to some initial nervousness in the industry (or at least the press). However, a series of statements from the leaders, as well as a lack of clamp-downs where they could have been implemented (for example BHIM and UPI could ban crypto related transactions) have sent signals to the industry that India is going ahead with a positive approach to cryptocurrency regulations, with a focus on growing the decentralised finance (DeFi) ecosystem in the country.

Nischal Shetty, Founder of WazirX says, "In terms of regulation, if you look at the Indian crypto situation, it is get-

ting better, because until a few months ago we did not even have clarity on whether the government is involved in this or not, whether they are thinking about it or not. And now we heard of a bill, and more importantly the bill did not come into the parliament. Even more importantly, our finance minister Nirmala Sitharaman and Mr Anurag Thakur, both of them have given multiple statements in parliament as well as on public forums, about how India wants to be involved in this (the DeFi Industry). Our FM has said India will take a calibrated approach towards regulations here, and Mr Anurag Thakur recently again spoke about how we want to come about with innovation in the tech here. All of that is showing that India is going in a similar direction as the United States, UK or Singapore, all of these progressive nations that are moving towards positive regulations. So there is a lot of positivity amongst
