Goodbye Internet Explorer

Microsoft will be retiring Internet Explorer in 2022. It won't be supported from June 2022 anymore. <http://dgit.in/jun21-16>

ASUS Zephyrus G15 Ryzen 9 5900HS

2021's eye candy laptop

The 2021 Zephyrus G15 takes everything that's good about the ROG Zephyrus G14 and brings it in a larger form factor. Coming in ₹1,37,990, the question is whether the ROG Zephyrus G15 has what it takes to go up against the dozens of RTX 30-series laptops in the market?

BUILD AND DESIGN

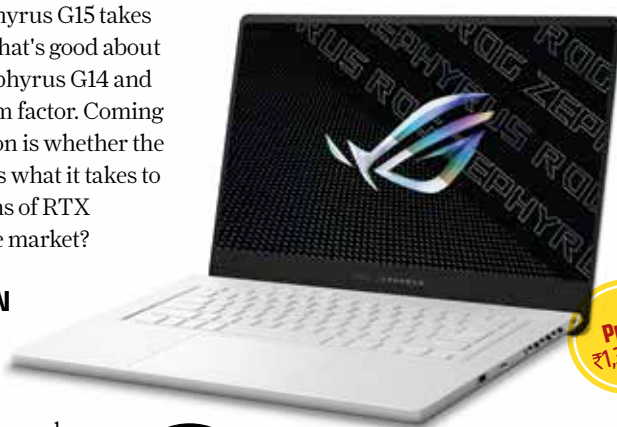

The Zephyrus G15 is eye candy. It's got a thin profile, coming in at just 19.9mm and weighs only 1.9kgs, which makes it lighter than most gaming laptops on the market. The Zephyrus G15 body's is made out of a blend of magnesium and aluminium, and the chassis is very rigid. The ASUS ROG Zephyrus G15 also comes with 6 speakers - two front-firing tweeters and a set of force-cancelling woofers under the palm rest.

KEYBOARD, TRACKPAD AND IO

The keyboard on the Zephyrus G15 took us a little while to get used to. It's is partly due to the oversized touchpad. The keys themselves are pretty good and the typing experience is comfortable. The trackpad impressed us with a smooth and very gliding-friendly surface. The Zephyrus G15 has two USB Type-A ports and two USB Type-C ports (Gen 3.2 each) with 100-watts of Power Delivery and DisplayPort support. In addition to that, you also get an RJ45 port, an audio jack, an HDMI 2.0 output, a Kensington lock slot, and a micro-SD card reader.

PERFORMANCE

We got the AMD Ryzen 9 5900HS variant of the Zephyrus G15 along with an Nvidia GeForce RTX 3060 GPU for review. The Ryzen 9 5900HS is an absolute beast of a CPU with 8 cores, 16

threads, and 16MB L3 cache.

In Cinebench R20, Zephyrus G15 managed to score 563 pts in the single-core test and 5106 pts in the multi-core test. In PCMark 10's modern office test, the Zephyrus G15 scored 6927 points and outperformed the competition.

Moving on to the gaming performance, the Zephyrus G15 managed to score 8028 pts in 3DMark's TimeSpy test and scored 18019 pts in 3DMark's FireStrike test at 1080p. Both scores are comparable to that of the ASUS ROG Strix Scar 15 that packs the RTX 3080 GPU. 1440p gaming is definitely possible but modern AAA titles will force you to bring down the graphics settings to get better frame rates. We noticed that even prolonged hours of gaming will not underpower the GPU due to thermal throttling, etc. With solid specs onboard, we think this laptop can also be a good option for content creators as well. In Lightroom, we were able to export batches of 50, 100, and 500 RAW files shot on a Nikon D850 in just about 119, 237, and 1098 seconds respectively. On Adobe Premiere, we exported a 5 minutes 4K project in 279 seconds, which is not too shabby.

DISPLAY

The Zephyrus G15 also comes with a

15.6-inch 1440p panel with support for up to 165Hz and 3ms response time. We recorded a peak brightness of 290cd/m² and it showed a black luminance level of just 0.3cd/m². The display also yielded a contrast ratio of 966:1, which isn't bad by any means for an IPS display. The display certainly shows some blue bias though.

BATTERY LIFE

The ASUS ROG Zephyrus G15 is packed with a 90Wh battery.

In PCMark 10's battery life test, the Zephyrus G15 managed to last for 6 hours and 20 minutes at peak brightness. In real-world usage, we were able to use the G15 for an entire day for work without having to charge even once. It can handle a typical workday which involves us writing and researching for reviews, watching YouTube videos and Twitch streams, and listening to music over a pair of Bluetooth headphones. Besides that, you can also charge the laptop for around 30 minutes to get half the juice back.

VERDICT

ASUS has left no stones unturned to make the Zephyrus G15 one of the best gaming laptops, and there's honestly very little left to complain about. The Ryzen 9 5900HS and the RTX 3060 GPU work well together to offer some impressive performance and the laptop is also superior when it comes to battery life and its stunning build quality.

—Karthik Iyer

SPECIFICATIONS

PROCESSOR: AMD Ryzen 7 5800HS or AMD Ryzen 9 5900HS 3.3 GHz (Turbo up to 4.8 GHz, 8 cores) | GRAPHICS: Nvidia GeForce RTX 3070, 8GB GDDR6 (80W TGP + 20W Dynamic Boost) or Nvidia GeForce RTX 3060, 6GB GDDR6 (80W TGP + 20W Dynamic Boost) | RAM: Up to 48GB DDR4 3200MHz (Dual channel) | STORAGE: 2* PCIe SSD Slot M.2 512GB/1TB | DISPLAY: QHD (2560x1440) IPS 165Hz, DCI-P3 100%, 300nits, 3ms Pantone validated, Adaptive sync
