Mi QLED TV 75

A fantastic large screen TV experience

Price
₹1,19,999

T

he Mi QLED TV 75 is a 75-inch TV that packs all the features, we

saw on the Mi QLED TV 4K, the 55-inch variant, as well as some additional ones. Let's find out how it fares in our review.

BUILD AND DESIGN.....76
FEATURES.....85
PERFORMANCE.....71
VALUE.....78

happy to say that the Dolby Vision on this TV is quite good. In some movies like the Dark Knight, the night sequences felt well balanced with the colours and contrast.

Moving over to HDR 10+ content, it was the brightness of the TV that led to a more enjoyable experience. Jack Ryan

in HDR 10+ has some sequences in the dark and a lot of budget HDR TVs including the Redmi Smart TV X65 lose some of the details in these sequences. However, on the MI QLED TV 75, these details were quite clear and totally enjoyable.

Moving over to SDR and FHD content, we saw our standard slew of test clips from movies and TV shows. For movies, the 'Movie' preset worked the best in addition to 'Standard'. 'Vivid', not so impressive.

As far as the resolution is concerned, FHD content looks fine, but considering the size of the TV, a dip in the resolution of the source from 1080p to 720p or lower is easily visible.

Now, moving onto gaming performance. Let's get the worst out of the way first. While 120Hz is advertised, the Mi QLED TV 75 does not support true 120Hz. This means, your PS5 or Xbox Series X will not recognise this TV as 120Hz capable. The TV does not

support VRR and the only HDMI 2.1 gaming feature it brings to the table is ALLM. If it's a gaming TV you are looking for, you can consider the Sony X90H which has two HDMI 2.1 ports with 4K at 120Hz and VRR.

If you are comfortable with 60Hz gaming, then this TV is a real treat. We played our standard slew of games on this TV and the experience was very enjoyable. It is a stark improvement over the Mi QLED TV 55-inch and while the lack of 120Hz at 4K and VRR is disappointing, those looking for gaming at 4K 60Hz will definitely enjoy this TV.

AUDIO PERFORMANCE

The speakers sound good for everyday use with clear vocals and a decent soundstage. But they lack channel separation. Even though the speakers are decent and get the job done for movies and gaming, you will want to pair this one up with a home theatre.

REMOTE

The remote control you get with the MI QLED TV 75, is the same one we've seen on other Mi TVs. It's quite a minimalist remote with a power button, Assistant button, hotkeys for Netflix and Prime Videos and dedicated buttons for Android and PatchWall UI.

VERDICT

What the Mi QLED TV 75 has going for it is a large screen QLED panel with local dimming for the same price and in some cases cheaper than popular 65-inch LED TVs. It has a good panel for watching movies along with great Dolby Vision and SDR performance.

—Sameer Mitha

BUILD AND DESIGN

The 75-inch Mi QLED TV has a premium build. There's a sand-blast coating around the frame and the bezels are very slim.

All the ports are at the back with the three HDMI ports and two USB ports facing out. The TV also has Bluetooth 5.0, dual-band Wi-Fi, Optical port, Ethernet port, 3.5mm port and AV port.

DISPLAY AND PICTURE QUALITY

At 75-inches we have a 4K TV with support for all popular HDR formats – HDR 10, HDR 10+, HLG and Dolby Vision. The TV covers 95% of the DCI-P3 colour space. It has full-array backlighting with 192 dimming zones. You get control over the colour space such as DCI-P3, BT 2020, BT709, etc. in addition to controlling the brightness, contrast, etc. of the TV.

PERFORMANCE

Kicking things off with Dolby Vision content, we have a lot of options on Netflix and Apple TV+ and we're
